

One advantage they possess over all other, patented medicines sold in such large quantities to the public, is, that they can scarcely be dangerous, whereas the others (containing, for the most part, substances whose action upon the animal economy is most powerful, such as bichloride of mercury and different preparations of antimony, lead, iodine and silver, and that in strong doses,) might prove very dangerous in many cases.

J. TAVERNIER, M.D.

Sir,—The many certificates you have received from the most eminent physicians in this country, preclude me from further eulogising your Mineral Waters. I will only add, that all those who have purchased them from me and used them, agree in stating that they cannot but highly recommend them to all their friends as productive of a very salutary effect.

I have the honor to be, yours, &c.

E. PICAULT, M.D.,

Montreal, April 30, 1849.

From the analysis of the Plantagenet Water, exhibited by T. S. Hunt, Esq., I feel very favorably disposed to recommend its use in dyspeptic, gouty, and nephritic affections and also in chronic rheumatism. As I have as yet made but few trials of its effects, I am unable to add any testimony from experience, further than that it is an efficacious and an agreeable laxative and diuretic, and I consider it well deserving of the patronage of the public.

J. CRAWFORD, M.D.,

Lecturer on Clinical Medicine and Surgery, M'Gill College.

Montreal, April 30, 1849.

Since the analysis of the Plantagenet Spring Water has appeared before the public, I have recommended its use to many of my patients with considerable benefit.

It is well adapted for many of the diseases of the urinary organs, affections of the skin, constipation, whether arising from gastric or hepatic derangement, scrofulous affections, and some forms of dropsy.

As a means of assuaging the intense thirst of cholera, and of assisting in the cure of that disease, added to other treatment, it must form a highly valuable medicine.

GEORGE D. GIBB, M.D.,

Licentiate Royal College of Surgeons, Ireland.

Montreal, May 30, 1849.
