Dear Sirs. I am writing a testimonial 's 3b' the strength of your Feerless Junior Chicken Fencing. Mine is four feet high. It turned two horses, each weighing 1400 pounds. They ran full tilt finto the fencing about 2 rods from each other at the same time. The result was that they turned a somerault over the fence, alighting on their heads and necks, exerticing them up some, but the fence remained intact. Yours truly, Joe Boothword, Surrey Center, B. C.

HORTICULTURE

The Growing of Cabbage A. W. Cook, Norfolk Co., Ont.

HE cabbage plant is a rank The cabbage plant is a rank feeder, requiring large quantities of nitrogen and moisture. Frequent cultivation is essential. Cabbage is planted in rows wide enough apart for horse cultivation, enough apart for norse contivation, the distances varying according to the nature of the plants' growth, but generally about 18 inches. There is, probably no plant that will give as much in return for cultivation as the cabbage.

The profit varies according to the coll. The cost per ton of production about five dollars per ton, and is about five collars per ton, and under an average season one can expect a crop of about 15 tons. Allowing \$10 per ton, this will leave a profit of \$75 an acre. This is a very good profit when one is growing it on a large scale, but where one grows an acre or so where he can do nearly all the work himself, the profit will be seemingly somewhat higher or if one is going to dispose of Lis crop upon a local market at so much per head, the profit increases. Cabbage grow-ing is a profitable branch of garden-ing under average conditions. It is an industry which will stand expansion.

Potatoes and Their Culture

W. T. Macoun, Dominion Horticulturist. ERMANY affords us a wonderful

child Any affords us a wonderful object lesson on the value of potatoes. To-day that country is depending to a large extent on its potato crop. She produces 1,250,000,000 bushels a year. If we could describe the country of the potatoes and potatoe ducts in Germany, the war would determine the country of t

shortly.

We, too, can afford to grow potatoes; taken one year with another they will pay as well as any crop on the farm. pay as well as any crop on the farm.
The average crop of potatoos in Ontario is 125 bushels per acre. Mr. Carman, editor of the Rural New Yorker,
once offered a prize for the highest
yield from a one-twentleth acre plot.

once offered, a prize for the highest yield from a cheworleth acre plot. Two contestants are wat the rate of over 1,000 to make a constant and the result of the contestant and the result of the contestant and the contestan

ground stems. At Ottawa we plant in rows two and one-half feet apart with the sets 12 inches to 14 inches apart in the row. We use seed potatoes of good size, cutting each tuber in four parts, one cut lengthwise and one crosswise. We believe the grower is well repaid
