A CHEAP CORKSCREW.

PATENT WATER-HEATER.

**A CHEAP CORKSCREW.**—A novel corkscrew has been introduced by Messrs. Nettlefolds, the well-known screw and wire manufacturers, of Birmingham, which is well deserving the attention of the retail trade. As it will be seen from our engraving, it is made of twisted wire, ingeniously fastened so as to afford all the strength and convenience necessary in the drawing of corks. The form of the screw is of the simplest character, and there is nothing in the implement itself that can get out of order, for the twist is so pitched that each downward pressure or turn of the screw actually increases the power of the corkscrew. It is obviously designed for "the million," and since the article is sold retail for a penny, it will probably soon become what we venture to designate it.—"Everybody's Corkscrew."

**HOW TO OBTAIN SLEEP.**—The following is recommended as a cure for sleeplessness: "Wet half a towel, apply it to the back of the neck, pressing it upward to the base of the brain, and fasten the dry half of the towel over so as to prevent the rapid exhalation. The effect is prompt and charming, cooling the brain and inducing calmer, sweeter sleep than any narcotic. Warm water may be used, though most persons prefer cold. To those suffering from over-excitement of the brain, whether the result of brain-work or pressing anxiety, this simple remedy is an especial boon."
