

# Is The Old Stove Worn Out ?

Why continue the use of it? A cracked lid, a burnt out grate, a handle off, makes it unattractive and inferior. This is not to speak of the heartache you have when trying to bake or cook, or of the large amount of fuel it consumes. But we need not dwell upon the defects. It has been a good old stove and has given long, faithful service. Perhaps there are memories connected with it that makes you loth to part with it.

However let us think a more pleasant thought, of a stove that for beauty of outline and finish, for quality of material and excellence of service is worthy to take the place of the old one.

## BUY AN *Acme* RANGE for YOUR KITCHEN

and within a week you'll be delighted with the way it serves you and wonder why you ever waited so long. The *Acme* has won a reputation for itself among housekeepers as a stove that gives desirable baking and cooking satisfaction with an economical use of fuel.

# 25.90

### Six Holes with 8-inch Covers FITTED TO BURN COAL

Roomy high shelf; teapot stands; removable copper-lined reservoir; swing broiler opening; large swing front door giving easy access to the fire for raking; full-size bailed ashpan; roomy surface hearth; duplex grates, easily removed without disturbing the lining; well lined firebox, which can be fitted for hard or soft coal. Large cooking surface; double covers and reducing cover; large square oven; convenient shelf under oven door for resting pans upon to examine baking; reliable oven thermometer, saves guessing at heat of oven; nicked towel rod; trip for opening oven door with foot when hands are full.

THE BODY is made of heavy castings; all plates and mountings are heavy and well bolted; the covers are thick and strong, made in two sections to prevent warping or cracking; each stove is provided with reducing covers to take different size kettles.

THE OVEN is square being same size at rack as at bottom. It is ventilated by a constant entrance of fresh air, producing even baking.  
THE FIREBOX is made proportionate to the size of the oven. The linings are heavy and can be fitted for hard or soft coal.

THE GRATE arrangement is ideal; the duplex grate bars are strong, open and easily removed without disturbing the linings.  
THE RESERVOIR is lined with copper, flush with main top of range and holds 3½ gallons.

Made to please the house-keeper on all points of construction known to be desirable in a range.

We do not supply pipes or cooking utensils at these prices.

For other Styles and Sizes of the ACME see New Fall and Winter Catalogue.

All Nickel Parts that would be in the way when black leading can be removed without any tools whatever.
