

*Xantholinus cephalus* Say. One under the bark.

*Enchomus ventriculus* Say. Taken singly under the bark.

*Silvanus planatus* Germ. Numerous colonies under the bark of the less decayed trunks.

*Cucujus clavipes* Fab. Four fine imagos taken 13th October, under the bark of a fallen trunk, one in an enclosure of borings formed on the inside surface of the bark, with pupal skin from which it had lately emerged beside it in the cell. On the inside of a strip of bark from another prostrate trunk, there were 18 or 20 of the empty cells in a continuous patch, where the beetles had transformed, six of these being in an exactly straight row, with their edges meeting in perfect regularity. Numbers of the larvæ under the bark of the trunks.

*Lamophleus pusillus* Sch. One colony of about 25 individuals under the bark, 3rd November.

*Brontes dubius* Fab. Two specimens taken at different times under the bark, 13th and 15th October.

*Hister vernus* Say. A solitary specimen under the bark, 15th October.

*Hister carolinus* Payk. A solitary specimen under the bark, 3rd November.

*Tenebrioides castanea* Melsh. A number taken under the bark of a small, dry, decaying upright trunk, and an occasional specimen in other trunks.

*Alaus oculatus* Linn. Four of the beetles taken in the decaying wood of the trunks, and, 13th October, one pupa. Of the four imagos, three show inequality of the elytra, one considerably, the two others slightly.

*Elater manipularis* Cand. One specimen under the bark, 3rd November.

*Melanotus communis* Gyll. Under the bark.

*Buprestidae*, larvæ of one species. A number of small, flat, big-headed borers taken 15th October boring between the bark and the wood of a rather sound trunk, one just beginning to decay, the bark being tight.

*Cis chevrolatii* Mellié. Two specimens taken 13th October, one on a small, hard kind of fungus growing out of the bark, the other under the bark.

*Parandra brunnea* Fab. Several dried specimens found under the
