

Scarlet fever was thought to be air-borne until it became certain that the scaling skin was not infectious. Now the evidence is very convincing that it is not air-borne.

Whooping cough can be nursed in the open wards of hospitals, provided the beds are 12 feet apart and canopies be placed over the heads of the beds.

As for tuberculosis, the weight of evidence seems to indicate that the infection is commonly, if not usually, air-borne, but this is probably because in this disease more germs are likely to get into the air than is the case in other diseases and because the bacilli have a fairly high resisting power.

PRICES AND METHODS OF DISTRIBUTION OF DIPHTHERIA ANTITOXIN.

(1) *Boards of Health, Isolation Hospitals, Dealers and Druggists* may obtain the antitoxin at the following prices:—

		Vials.	Syringe Package.	
1000	Units	.25	.35	
2000	"	.50	.60	
5000	"	1.25	1.35	Not
10000	"	2.50	2.60	Returnable

from Dr. J. G. Fitzgerald, Department of Hygiene, University of Toronto, Toronto, Ontario.

Druggists and Dealers will be allowed to charge 25% in excess of these prices, making the following prices to the public:—

		Vials.	Syringe Package.	
1000	Units	.30	.45	
2000	"	.60	.70	Returnable
5000	"	1.55	1.70	within 12
10000	"	3.10	3.25	months.

(2) *Medical practitioners* will not be supplied directly but may obtain supplies from local Boards of Health handling the antitoxin, from local Druggists, or from Ingram & Bell, Limited, 256 McCaul Street, Toronto, or J. F. Hartz., Limited, 456 Younge Street, Toronto.

Collection of Accounts. The Provincial Board will undertake the distribution of the antitoxin on a cash basis only.

Accounts to Boards of Health and hospitals will be rendered at end of each month. Accounts to Druggists will be collected by Bank draft, terms net.
