Page 2 (Slightly abridged)

The technology to produce and use such a simple and effective method of construction is an experimental investigation of the use of plastic blocks in the construction of buildings. The results of the investigation are shown in the film. The tests showed that by changing the shape of the blocks, it is possible to increase their hardness to fourfold increase in their hardness.

The fact that new technology is being developed at the present time is a result of the fact that the construction industry is being transformed. The results of the investigation are shown in the film. The tests showed that by changing the shape of the blocks, it is possible to increase their hardness to fourfold increase in their hardness.
