

### **THE CANADIAN CONNECTION**

Canadian companies pioneered the use of videotex technology in North America. Canadian manufacturers have supplied videotex equipment to many of the leading communications and electronic publishing firms in the North American market including Times Mirror, The Washington Post, AT&T, and CBS. Canadian companies such as Systemhouse Ltd., Infomart, Cableshare, Perle Systems Ltd., and the Genesys Group have developed systems in close co-operation with bankers and offer the most advanced transactional services in the world.

Leading North American financial institutions have opted for performance and have chosen Canadian systems, software and consulting services.

For more information on the most advanced videotex systems, technology, software and consulting services in the world, contact:
