

### The Electrical Horsewhip.

It seems doubtful, says an exchange, whether objection can be brought against the latest form of horsewhip, which is constructed so as to give a slight electric shock to the animal. The handle, which is made of celluloid, contains a small induction coil and battery, the circuit being closed by means of a spring push. The extremity of the whip consists of two small copper plates insulated from each other, each of which is provided with a tiny point. The plates are connected with the induction coil by means of a couple of fine insulated wires. As a means of surprising a sluggish animal into doing his best work without the infliction of physical pain, the electrical horsewhip will by many be hailed with gladness.
