The Indians of Port Simpson are asking to be allotted a proper camping ground in the vicinity of the city...

Mining News.

Around Cascade.

A number of mining properties in the territory directly tributary to Cascade are getting into such a state of development that machinery will be required for working them to the best advantage...

FACTS ABOUT COFFEE.

It improves With Age, Like Wine, and is more palatable than any other beverage. It is the most healthful and refreshing of all drinks...

Similkameen District.

From recent developments in the Similkameen district it is quite evident that the expectations of the prospectors are to be realized, and that the section of mineral country comprised by that mining division will cut a very considerable figure in the mining history of British Columbia...

NEW WESTMINSTER.

Workmen on Tuesday removed the wrecked roof of the Windsor hotel, which, since the sale of last week, has nearly blocked up Begbie street...

THE WEDDING.

The wedding was solemnized on Tuesday morning at Edin, second daughter of Mr. J. W. Harvey, accountant at the British Columbia Penitentiary...

THE FUNERAL.

The funeral took place on Tuesday afternoon of the late James Phillips, an old pioneer of Westminister. The last rites were conducted by Rev. A. Shildrick, and the remains were followed to their resting place in the Odd Fellows' cemetery by a large number of relatives and friends...

per and some silver and gold. The first of July has a 24-foot ledge, with copper in various forms—native, grey, peacock and pyrites—all across. The Copper Mountain has a nice showing of chalcopite...

At Fish Lake.

At Fish Lake, a few miles south of the Otter Creek camp, there are good surface showings of a similar character, and arrangements have been made for a good deal of work, which will be prosecuted during the winter...

Slocan Lake Ore Shipments.

The ore shipments from Slocan lake points aggregate 2,988 tons since January 1st of this year. The shippers were: Boston 500 tons, Marlon 20, Enterprise 600, Tamarac 20, Black Prince 40, Chaplain 15, Comstock 120, Emily Edith, Freda, S. Noonday 530, Vancouver 330, W. Reddy 580...

At the beginning of the season.

At the beginning of the season, Mr. Hicks says, the only camp in the district was that on Copper Mountain, and though there were many claims scattered over the surrounding hills, none of the showings outside that section were of such richness as to excite unusual interest...

The claims of the Copper Mountain.

The claims of the Copper Mountain camp, which are situated on the south of Princeton, were nearly all staked previous to this year, but it was not until the present season that any serious development was attempted. It has been shown, however, that the immense bodies of copper ore, both in the form of native copper and in the form of malachite, which appear on the surface of the veins, carry consistent values with depth, and the work of exploring the ledges will be carried on rapidly and on an extensive scale...

The greatest amount of work done.

The greatest amount of work done on any Copper Mountain property during the season is on the Gardner, where a six-foot deep shaft was sunk, and six feet deep demonstrates that the vein is at least 75 feet in width at that point. A shaft some 60 feet deep, sunk on a showing of the Gardner, has also demonstrated that the vein is all in copper pyrites and malachite, and is seldom out of satisfactory quality in England. In London it has a slight start of tea, for the first copper mine was opened about the year 1652...

At Boulder creek.

At Boulder creek, one of the new camps, located 25 miles northwest of Princeton, there are many ledges of unusual size, surface assays from which give as high as \$25 in gold and good percentages in copper. With the exception of the Twenty-Mile claims, which carry gold in iron pyrites, the Boulder creek claims give the best gold assays in the district. Years ago this creek was worked for placer gold...

SEAGRAM'S WHISKIES.

"DENATURALIZATION."

Reasons and Methods for Making Eatables and Drinkables Unfit to be Swallowed. Denaturalization is a term which is now applied to that process which renders certain substances unfit for human consumption...

Without "denaturalization" alcohol for the purpose of the arts and industries would be so expensive as to be prohibitive, because it would be drinkable. But because it has been made to add a substance to the spirit which makes it undrinkable, but which at the same time does not interfere with its properties for certain manufacturing processes...

Without "denaturalization" alcohol for the purpose of the arts and industries would be so expensive as to be prohibitive, because it would be drinkable. But because it has been made to add a substance to the spirit which makes it undrinkable, but which at the same time does not interfere with its properties for certain manufacturing processes...

REPROACH TO WOMAN.

The decay of British housekeeping was among the subjects dealt with to-day by Mr. Henry Higgs, as president of the Economic Section of the British Association. He frankly told his audience—in which, of course, the British nation was represented—that housekeeping was no better understood than it was two centuries ago—perhaps even not so well. In the interval, however, the art had become enormously simplified...

A Minimum of Domestic Experience, and were, with the best intentions, the innocent agents of inefficiency and waste, even in the simplified household of to-day. Our fiscal systems, with its few taxes on articles of food, and its light pressure on the working classes, was also responsible for neglect. A result of the preference of the French for liquid and of the English for solid food, was that the essential juices of the meat, preserved by the French in soups and ragouts, was with us to a large extent wasted...

CANCER OF VEGETABLES.

Dr. Bra and Dr. Chevalier, in their researches on cancer have reached independently the same conclusions. Dr. Bra has isolated what appears to be the parasite of cancer, in the mushroom. Examining fragments of diseased wood, particularly the wood of apple trees, he found characteristic conidia of necrotia ditissima. These he "cultivated" just like ordinary microbes. They began growing in them cells, in every respect like the cells of the human cancer mushroom. Dr. Bra, wishing to make a crucial test, got leave from the government to inoculate trees of the forest of Meudon, near Paris, with cultures of human cancer. He chose trees far removed from any diseased ones. Months later spots of dry rot appeared on the trees inoculated—beeches, maples and sycamores. An elm died from the cancer so communicated. Other tests have given striking results. Dr. Bra does not conclude that animal and vegetable cancers are caused by one specific fungus, but he thinks a number of diseases of plants are extremely like diseases of animals.—London News.
