urday rday evening. Mrs. G. F. Hawkhurst, of Main street, and children have gone to Bayswater to spend the summer. Miss Grace Dick, daughter of John M.

Dick, left Saturday for Alberta, where she will be married to Edward Parks.

Very Seriously Injured

The Transcript's Salisbury correspondent nt writes: Calvin Wheaton received ies on Thursday which it is feared may prove fatal, while attempting to stop a runaway team at Brown's Mill at this place. The man who owned the team left them standing attached to the wagon with their bridles off feeding, near the mill, and when the mill whistle blew the horses took fright and started away. Mr. Wheaton saw them and ran in front of them in an effort to keep them from getting away, when he was thrown under foot and fearfully injured. His head was badly cut, several ribs piercing one of his lungs. Mr. Wheaton was carried to his home nearby and Dr. Moore was soon with him.

After the doctor had dressed the wounds Mr. Wheaton rested somewhat easier, but his case is considered a very critical one. He has a wife and large family.

Nova Scotia Lobsters.

Close time on lobsters in Nova Scotia began Friday. During the time since the Nova Scotia season opened in April, there have been received in Portland from Port Matoon and Digby 219,138 lobsters, valued during the alternoon, covering noe miles in 10.46 1-5. The prizes were presented at the Bieycle Club house this evening by R. S. Barker. The base ball match in Scully's Grove this morning between the Tartars and Woodstock Cotts developed into consider-able of a farce. The Tartars won by a year, and yet in count more than 18,000 lobstens were landed. The prices this year have been unusually high, averaging a

little more than twelve cents apiece, but some have arrived that have brought sixeen cents and seventeen cents apiece. Bangor News.

The work of the normal school in a state ossessed as it is of an excellent system f education and efficient schools, is to open up to the student-teacher the mys eries of the child-mind, the devices prac Nature Study. iced for overcoming difficulties which are His Honor, Mr. Justice Landry, not be-ing present, John Brittain was called on to give his paper on "Nature Study and School Gardens," which had been shut likely to arise in the pupil's mind. The teacher should, just as well as a doctor, be possessed of the best knowledge, right

in to dite, in regard to the ways of deal-ing with young minds. If students come to the normal school ill equipped with the academic knowledge necessary, by all means send them back. out at a previous session. The introduction of nature study does not mean to shut out the course already on the syllabus, but rather to supplement Do not do the work of the superior or high school, nor lower the usefulness of and give an explanation and introduction to the others. This study will offer good subjects for compositions. We may re-member that the great poems of Tennythe normal school by spending time or work that ought already to be completed. work that ought already to be completed. In reference to our own normal school, we find a large number of student-teach-ers, many of whom do not intend to make a life-work of teaching. Right along side the Normal school is our own excel-lent and growing university, where courses son, Wordsworth and others cannot be fully understood unless we are close obre given in metaphysics and natural sci-ence. The work of the Normal school at Brittain. Only a few hours are taken, which would amount to only four or five present is too great for the Normal school at present is too great for the staff. The work might be spread and some arrange-ment made to give the university advan-tages to at least the Superior and Gram-

days all together in a year. Nearly every boy acquires tastes and these cling to him throughout life. A good many complain nar school teachers. The Normal school needs, above all, pro-

gressive men as instructors-not men chained to the past. Old theories may be good, but will wear out. The men at the head ought always to be alert to intro-duce new ideas and new advantages.

Paper on Drawing.

The next address, on drawing, was given by H. H. Hagerman, of the Normal school. No argument is necessary to show that drawing is important to^{*} the school course. A pupil ought to be able to ex-press himself quite as well by drawings as by good language. To look at the present status of drawing in our schools, we must admit that it is far too low. Too little time is devoted, and that ill-spent. The pupil is told to turn to a certain page and draw, while the teacher has been at other draw, while the teacher has been at other work. The pupil makes not a real, but only a mechanical copy. This is not teaching drawing. Books cannot instruct in drawing. The best drawing book is a blank book. He thought that present drawing books could be replaced with much better ones

much better ones. Many a teacher readily admits that he er she does not know anything about or can't draw. Teachers must learn first how to draw and teach themselves. Can they do this by themselves? Yes, un-doubtedly; yet it requires persistent efdoubtedly; yet it requires persistent ef-fort. Any person can learn to draw. Mr. Hagerman never yet had found a pupil who could not progress in drawing. It is natural for children to draw. They do so before they go to school. Reading of books will not teach how to draw. We have got to make hundreds of experi-ments

ments. The first thing necessary, is to cultivate freedom of movement, instead of the or dinary carefully traced line on a drawing

We should cultivate the aesthetic stast of the child, that he may know what is and appreciate the beautiful. In connection with drawing a good deal

In connection with drawing a good deal of manual training can well be combined, for instance, cutting and folding papers and making of models. We must have first of all free-hand drawing. Our object in teaching drawing is not to make pictures, but to give the pupil the ability to represent and the training for the mind. Before the pupil draws a line he should have some men-

draws a line, he should have some men-tal conception behind that line. Mr. Hagerman then gave, in a good, practical way, just how he would proceed

esolution be forwarded to Mrs westward If, as Hon. Mr. Fielding stated, work is Further resolved, that a copy of this resolution be incorporated in the minutes of this association."

to begin simultaneously on the various sec-tions, the time should not be long before operations are begun at this end. The road could be extended from Chipman to Moncton with comparative ease, and thus both by way of Moncton and Norton sup-plies for the extension westward could be aviable handled

quickly handled. It is pointed out that if the line were extended west from the Queens county, coal fields a new and profitable market would be provided for the large deposits

of excellent coal in that region. While nothing definite has been stated by any person in authority, there is a feal-ing that this solution of the Central railway problem is among the possibilities.

In the shoot unless we are close of servers of nature. Five school gardens have been estab-lished in Carleton and Victoria counties. These have been in operation only a few weeks. These have been started by Mr. Sentence Suspended in the Shop-Ellifting Case.

throughout life. A good many complain that we have too many subjects on the syllabus. But if we analyse our daily life the same thing will be found. Surely national environment should claim and be given a place, and if done at all, done well. All other subjects, as arithmetic and algebra, have a set course. In nature the sume the subjects, be true In the case of the King vs. Louisa and algebra, have a set course. In nature studies the same ought to be true. Mr. Brittain would ask for no more than one-tenth of the time for nature study. Nor would he require any home work. This should be given to the other studies.

husband entering into a recognizance for \$200. This was done. Very little teaching is really required,
