

Hints for August

THE old rooster can crow well, but better sell him or get him away from the hens some other way. He pesters them so they do not do their best.

If there are chicks hatched this month they will make better roasters than if kept for layers.

Shade, green stuff, plenty of water, are essential in August.

Don't be too flattered if the growing chicks run after you whenever you appear. The truth of the matter is that they are hungry. Keep growing feed before them all of the time.

Good feed, cleanliness, good tools and proper houses are four primary essentials for poultry keeping.

One bad egg will put a question mark on the whole dozen and may lose a good customer.

The Model Poultry House

Frank Marcellus, O.A.C., Guelph, Ont.

DO not recommend any one breed of fowl above all others. Similarly I do not believe there is any one type of house that can be recommended above all others. There are certain principles, however, that apply to all houses and which we must observe if we would have a good house.

First of all, a house must be perfectly dry. A hen will not lay well in a damp house.

In the second place, the house must

be well ventilated. It is more difficult to ventilate a poultry house properly than any other class of house on the farm, as there is an excessive amount of moisture in the breath of a hen.

In the third place, in our efforts to ventilate properly, we must avoid draughts, as draughts are the prolific source of roup and cold.

You can build open front and cupola houses, or a combination of cupola and glass, but if any of these conditions are lacking, you will not have a good house.

New Prices, August 1st, 1916

The following prices for Ford cars will be effective on and after August 1st, 1916

Chassis	\$450.00
Runabout	475.00
Touring Car	495.00
