## It Pays To Be Right

AND there is no place where it pays better than in the harvest field.

That is one place where mistakes are specially costly. To come successfully through the season to the harvest time, and then fail of a just reward because of inferior or imperfect harvesting machines is unfortunate, indeed. You may make sure of success by buying a Deering binder.

The Deering is designed and constructed with a view to efficient and long continued service. It meets fully the most exacting demands of the grain grower.

Should the grain be tall or short, light or heavy, standing or down and tangled, the Deering will harvest it all cleanly and without loss.

Being made in four sizes—5, 6, 7 and 8-foot cut—the Deering binder meets a wide range of uses.

The wide-cut binder is specially valuable to the large grain grower, being of unusual capacity.

CANADIAN BRANCHES: Calgary, London, Montreal, Toronto, Ottawa, Regina, St. John, Winnipeg.  
**INTERNATIONAL HARVESTER COMPANY OF AMERICA,**  
(INCORPORATED)  
**CHICAGO, U. S. A.**

This extra wide binder is provided with a tongue truck, which reduces the draft and weight on the necks of team. We can't bring out the many special features of the Deering binder in this small space.

You should read about these in the Deering catalogue.

The Deering line of harvesting machines is complete and includes, besides grain and corn harvesting machines, binder twine, mowers, tedders, sweep rakes, side delivery rakes, hay loaders, stackers. Also a complete line of tillage implements and seeding machines, comprising disk drills, shoe drills, hoe drills, cultivators and seeders, smoothing, spring-tooth and disk harrows, land rollers and scufflers. Also gasoline engines, cream separators, hay presses, wagons, sleighs, and manure spreaders.

Call on the local Deering agent and discuss with him the qualities and advantages of Deering harvesting machines.

Any of the following branch houses will supply you with the Deering catalogue.

## WANTED TO-DAY 100,000 FARMERS

TO INVEST ONE CENT IN A POSTAL CARD

Address it to me.  
Say on it:  
"Send me your SPECIAL 20,000 Bike Harrow Cart Proposition."  
You will be glad afterwards if you do it to-day.  
Yes, sir!!!  
It will pay you big  
My proposition gives you a chance to get the best harrow cart ever built on two wheels for nothing.  
It's so good you can't afford to walk.  
It's a big undertaking for me to sell 20,000 carts, but my proposition is doing it.  
It's a little out of the ordinary.  
Get in on this 20,000 cart deal while it lasts.  
It only costs you one cent to get the proposition.  
I leave it entirely to you if it is not just a little bit the most interesting harrow cart proposition you ever heard of.  
Drop me a postal if you don't write another one for six months.  
Don't buy a cart of any make, kind, brand, or at any price until you first get my proposition. I will then leave it entirely with you to be the judge.  
I know what you Canadian farmers need in a harrow cart. I have built and sold more harrow carts than all other manufacturers put together and am selling them only direct from my factory to your farm.  
I own and operate a large farm at Lajord, Sask., near Regina, and know what is required of a harrow cart in Canada.  
I know there is no harrow cart built that will begin to equal the Bike and meet your requirements like it.  
It is a high wheeler with a positive lock, just right for rough ground.  
I will carry a large stock at Regina and can ship quick.  
Write me to-day. It's interesting.

### BLOODY MILK.

What causes my cow to give bloody milk out of one teat? She is well stabled, well fed, and well bedded, and the hair comes off around her neck and shoulders.

Sask.

J. W. M.

Ans.—There has been congestion in that quarter of the udder, and once that is relieved the milk will cease to be reddened. Give in the feed one ounce of saltpeter daily for a few days. Should suspect some parasitic trouble, possibly lice, as the cause of the hair coming off the neck, and for such would suggest the use of some of the sheep dip preparations advertised in the columns of this paper.

### SUSPECTS LUMPY-JAW (ACTINOMYCOSIS).

I have a two-year-old heifer, that is soon to calve, that has a swollen gland on the neck under the left jaw, about the size of a large hen's egg.

Would like to know if it is lumpy jaw, and what is best to do for it.

Man.

SUBSCRIBER.

Ans.—You had better leave the heifer alone until she comes in and might two weeks after calving give the following treatment: half to three-quarter ounce doses of iodide of potassium daily, painting the sores with equal parts of pure carbolic acid, iodoform, and turpentine. A cheaper treatment is the following: biniodide of mercury, 1 dram; iodide of potassium, 2 drams; water, 12 ounces. Shake together until dissolved. Give a twelfth part (one ounce) three times a day in the food.

### MANGE.

I have a mare that got lousy the beginning of the winter. I used coal oil and soap suds on her and the lice apparently have gone, but for the last six weeks or two months she seems to have had the mange. Both sides of her head and neck, especially close along the mane and between her hind legs, are the parts most affected. She has rubbed and bitten the hair off these parts. I read in answer to a similar enquiry to use creosote, sulphur and linseed oil, which I have done, using it for the third time to-day. She is still itchy, but has improved quite a bit and I hope she will soon be well again. But what I want to know particularly is this:

1. Is the disease likely to spread to the other horses?
2. Is a human being likely to catch it? I washed her and rubbed the dressing in with my hands, but my neighbors seemed to think this very dangerous, and one went so far as to say that it was as bad a disease as glanders and lots of horses were shot for it.
3. Is this so?
4. What is the cause of this disease?
5. Would clipping the mare prevent it spreading on her?

Sask.

DOUBLE X.

Ans.—Your treatment, if persevered in, will eradicate the disease.

1. Yes, unless special care is taken to prevent it.
2. No. The special parasite which causes the disease in the horse does not find a desirable host in the human being.
3. No.
4. It is due to a class of parasites called acari. The one that most frequently troubles the horse is the *sarcoptes*, which burrows beneath the outer layer of the skin and causes excessive itching.
5. To get the treatment properly applied, it is usually of much advantage to clip the animal.

### LAME BACK.

Horse had inflammation of the kidneys this fall and I had a veterinary surgeon, and it got all right again; but he is weak in the back yet he does not get up right yet. What should I do to get him all right again?

Sask.

J. A. G.

Ans.—Your very limited description of the case will not warrant us in prescribing for your horse. Your horse may be old and debilitated from in-

## CURES

Dyspepsia, Bolls, Pimples, Headaches, Constipation, Loss of Appetite, Salt Rheum, Erysipelas, Scrofula, and all troubles arising from the Stomach, Liver, Bowels or Blood.

Mrs. A. Lethangue, of Ballyduff, Ont., writes: "I believe I would have been in my grave long ago had it not been for Burdock Blood Bitters. I was run down to such an extent that I could scarcely move about the house. I was subject to severe headaches, backaches and dizziness; my appetite was gone and I was unable to do my housework. After using two bottles of B. B. B. I found my health fully restored. I warmly recommend it to all tired and worn out women."

## KOOTENAY

Dr. McDiarmid, Principal of  
Brandon College, Writes:

"Brandon, Man., Aug. 31, 1906  
Messrs. McDermid & McHardy,  
Nelson, B.C.

Gentlemen.—After spending a day in examining your Kootenay-Columbia fruit lands at Robson I am pleased to express the most favorable impressions of these lands. I am expressing that judgment by the purchase of three lots for myself and friends. The reasons of my selection of these lots are:

- (1) The evidence of the suitable quality of the soil for raising fruits.
- (2) The lay of the land—long, level stretches, first on the lower river flat and then on the bench 400 feet above.
- (3) The increased rainfall that makes artificial irrigation as a rule unnecessary, while yet there are ample possibilities for irrigation if it should ever be found necessary.
- (4) The beauty of the scenery. From every part of the lands the scenery is beautiful, but from the upper bench it is superb. The winding river and railway lines in the valley, with greenland mountains all around, make a scene of indescribable beauty.
- (5) The extended area. Those who buy lots here will not find themselves isolated. There will be afforded in the hundreds of lots, joining each other without a break, advantages of a social, religious and educational character that are invaluable.
- (6) It is in the main line of travel to the East, via the Crow's Nest route, and to the West, via Arrow Lakes to Revelstoke. The facilities for getting fruit quickly to the market are unsurpassed.

Yours very truly,

(Signed) A. P. McDIARMID,  
Principal Brandon College.
