exercise with shorter time. At this point

of the question.

A resolution providing that pupil teachof the meeting of the association be admit- Thomas Frederick Dwyer, late of the New

Then followed a paper on "Reading" by Mr. A. D Brown. This paper dealt first with the importance of a correct and orderly position in class. Introductory to the lesson proper, the author of the paper considered necessary the intelligent understanding of the thoughts contained in the lesson. In more advanced classes the grammatical construction of the sentences could be advantageously studied. Some of the faults in reading were then noticed and illustrated by were then noticed and illustrated by examples, also the writer's method of correcting them. These faults, particularly with younger pupils, first have to deal with unnatural tones, these could be largely and most efficiently corrected by

HOW TO PLANT. Rear in mind that we are dealing with an article, that under favorable circumstances, grows from 8 to 10 feet, and the conclusion naturally follows that it must have room. The best authority says to put the rows 31 feet apart. Some recommend planting in the drill, others in the hill. It has been shown that planting in the hill gives earlier maturity abroad, and for this season, if no other, we think it advisable to plant in that way here. More That clatter at the blinds
And make a critter swore,
