STRAWBERRY OF MONTREAL.—This is none of the "Strawberry" apples of the books. The tree is extra hardy, and its stout and vigorous growth, and clean, glossy bark, show it to be especially adapted to the cold north. It is erect in growth, without having a dense head. Fruit above medium in size, sometimes large, roundish-conic, yellowish, mostly splashed with red. Flesh yellowish, tender, moderately juicy, mildly sub-acid. It ripens with the Duchess of Oldenburg, but is a better dessert apple. Placed by many growers among the best five for profit, and I recommend it to the attention of your readers in the cold north-west.

DECARIE.—Regarding this apple tree, I make the following extract from the invaluable report of the Fruit Committee of the Montreal Horticultural Society for 1876 :-- "The original tree, producing this noble apple, stood in Jeremie Decarie's orchard in Coteau St. Pierre. east of the Cote St. Luke road, which orchard is now owned by It was cut down a few years his grandson of the same name. ago. It was then about a hundred years old, had a butt as large as a flour barrel, and was of a height so remarkable as to be compared to The tree is a vigorous grower, and forms an erect head, which an elm. spreads but very gradually, so that though it attains great size, vet it may be planted fairly close. We have seen eighty, if not one hundred of these trees, planted fifteen years ago on the Coteau, and growing in sandy loam, and from these we judge the tree to be hardy and healthy. It bears light and heavy crops alternately. We once saw seven barrels under one tree which had been fifteen years planted. Mr. Lortie. after marketing them for many years, says they are very profitable. Fruit, on trees grown in grass, even when they have suffered from want of drainage, large; but when the soil was cultivated, very large, and commanding marked attention. Form, roundish-conic to oblong-conic. often deeply ribbed, with a deep, narrow, russety cavity, and a basin which, though medium in depth, is wrinkled and obscurely ribbed. Color, light or dark red, sometimes very dark all over, and covered with a beautiful bluish-white bloom, with many medium sized grav dots. Flesh whitish, rather firm, juicy, with, says Downing, a slight peculiar quince-like flavor. Season, September fifteen to October first."

With regard to the FAMEMSE SUCRE, the Fruit Committee of the Montreal Horticultural Society say that it is "an inviting, blackish-red,
