Earle's Air and Steam Injectors

For burning hard or soft coal screenings under steam boilers, for working gas producers, &c., &c., exhausting gases from mines, ventilating ships; buildings, &c. Can be applied to any boiler without disturbing the present setting. Guaranteed to do the work satisfactorily. Can give the best of testimonials showing their efficiency. Fully covered by letters patent in Canada and the United States.

Testimonial from the Wilson Publishing Company,

TORONTO, CAN., Nov. 4th, 1891.

DEAR SIR, Please find enclosed herewith cheque for the combined Air Injector and Exhauster purchased from you. I am very much pleased with your invention; we have used other air injectors, also a fan for burning hard and soft coal screenings under our steam boilers, and prefer your device to any of them. It requires less steam and makes less noise in operation. My engineer uses it in the morning to start the fire with less than five pounds of steam shown on the steam gauge. This, together with the fact that it is independent of the engine and machinery and can be operated to its full capacity without running either, gives it a decided advantage over fans. I can safely recommend it to any one requiring a first-class blower.

S. R. EARLE, Esq., Belleville, Ont.

Yours truly, (Sgd) S. FRANK WILSON.
