LIQUOR HAEMOFERRUM

(Liquid Haemoferrum)

Is the most recent form of administering Haemoferrum (oxyhaemoglobin). The iron of the blood is the best form of iron to administer to the blood, and such a form of iron is Haemoferrum, the pilloids of which have met with remarkable success in the hands of physicians. To meet a general demand for Haemoferrum in liquid form, which might be acceptable to delicate women and children who object to the pilular form, we recently devised Liquor Haemoferrum, a delicious cordial, each teaspoonful of which contains six grains of Haemoferrum. The addition of the small quantity of pure spirits it contains seems to be of value in this preparation, inasmuch as its slight stimulating properties work advantageously with the administration of iron.

Literature and samples will be sent to physicians on request.
