*Abbreviations used in this table: AA—activated alumina; AD—alternative disinfectants; AX—anion exchange; CC—corrosion control; C-F—coagulation-filtration; Cl—chlorination; D—disinfection; DEF—diatomaceous earth filtration; DF—direct filtration; GAC—granular activated carbon; IX—ion exchange; LS—lime softening; LSIR—lead service line removal; OX—oxidation; PE—public education; PR—precursor removal; PS—performance standard 0.5–1.0 ntu; PTA—packed-tower aeration; RO—reverse osmosis; SWTR—source water treatment; TT—treatment technique.

†The sum of the concentrations of bromodichloromethane, dibromochloromethane, tribromomethane, and trichloromethane.

‡Coagulation-filtration and lime softening are not BAT for small systems for variances unless treatment is already installed.

§Final for systems using surface water; also being considered for groundwater systems.

**No more than 5 percent of the samples per month may be positive. (For systems collecting fewer than 40 samples per month, no more than 1 sample per month may be positive.)
