Brossard, Quebec
J4W 1L7

Tel: 514-671-5901

Fax: 514-671-7182

Export Contact: Ms. Nicole Ross, Export Coordinator

Laborie Medical Technologies Corporation introduced the very first totally computerized urodynamics system in 1984, and has since remained the world leader in this technology. These Canadian-made urodynamic processors can be found in some 20 countries throughout the world. A division of the LABORIE group of companies, LMTC was created in 1990 to expand the sale of Laborie Medical Technologies products beyond the Canadian market. The new markets include other countries, other original equipment manufacturers (OEM) and other industries.

Laborie is regularly asked to manufacture prototypes and has been recently requested for carts specifically designed to hold video equipment used in the operating room. Laborie produces carts to accommodate all types of video and endoscopic equipment currently on the market. Laborie Medical Technologies is currently working towards the implementation of ISO 9000.

Laborie is seeking distributors for its products in Europe, Latin America, Asia, Africa, the Middle East and the Pacific Rim. Laborie is also interested in distributing products complementary to their product line, and are also seeking strategic alliances for co-development of products related to its product line.
