The Horse Breeding Industry of Saskatchewan.

Considerable activity has been shown in the horse industry of Saskatchewan by the purchase of a large proportion of the 18,000 work horses which have been brought in from the Province of Ontario and the States and distributed to western points from Winnipeg and Brandon since the 1st of January. This, in itself, is a significant phase of the horse breeding industry of the province, and goes to show that it will be many years before the supply of work horses is likely to overtake the local demand. At the same time there is a sufficiently high duty placed on the importation of horses that are not of pure breeding to make the business of the owners of stallions in Saskatchewan a lucrative one.

It may be mentioned in passing that it is strictly essential that the owners of stallions should take out enrolment papers or have their animals' certificates of enrolment transferred in the manner prescribed by The Horse Breeders' Ordinance of Saskatchewan. Furthermore, every bill, poster, or advertisement issued or used by the owner of a stallion enrolled under the above mentioned ordinance must contain a copy of the stallion's certificate. These regulations apply with equal force to pure bred and grade animals. A copy of The Horse Breeders' Ordinance may be obtained, free of charge, on making application to the Deputy Minister of Agriculture, Regina, Sask.

A New Wing Feeder for Canada

The Hart Grain Weigher Company have perfected arrangements whereby they will now manufacture the Brown Wing Carrier.

This carrier is adapted to any standard make of separator or any standard make of feeder and can be attached without any material alterations to either.

The carrier is supported on the end of a boom, which projects forward from the lower front corner of the separator frame. The outer end of this boom is guyed with a tie rod to the upper front corner of the separator frame and the boom is braced to the iron cylinder side.

There is no overhead derrick or framework to catch in trees or wires or to interfere with going under bridges, etc. The carrier troughs are 15 feet long and swing on a universal pivot. The carriers are raised and lowered by a reversible ratchet and screw which is located in convenient reach from the ground and the lateral movement or swing of the outer edge of the carrier may be controlled from the top of the stack or load, or from the ground; that is, a workman may swing the outer end without assistance from the ground; or a person on the ground may do the same without assistance from one on the load or stack.

For further information regarding this carrier write the Hart Grain Weigher Co., Peoria, Ill.

Five Million Trees
