The ore is obtained by very primitive methods. In winter a hole is cut in the ice, a scraper attached to a long pole is inserted, and all the ore within reach is collected into a heap beneath the hole. Some of the mud which has been scraped together with the ore is removed by stirring the mass with poles and the ore is then scraped into bags which have been sunk and is hauled up. In summer this curious mining operation is conducted in a similar manner from rafts anchored in four tons of ore a day. Steam dredges the lake.
