A good putty or masric suitable for decorators use may be prepared, according to Cosmos, by taking nine parts of well-dried clay that has previously been purified; this is mixed with one part of litharge, and then enough linseed oil is added to the mixture in order to bring it to the consistency of wet plaster. Be-fore applying this mastic, the surfaces that are to be joined should be thoroughly moistened with a sponge; this is particu-larly necessary in the case of stone or brickwork. The mixture takes about five or six days before it is completely hardened, but it possesses great properties of adherence and durability.
