**THE MUSICAL HERALD**

Is pronounced by both Press and Public the foremost magazine of its class in America.

- "It is complete in all its departments."
- "We have yet to see one which excels it."
- "This is the best musical monthly published."
- "The ablest periodical of its class in the country."
- "Is now by far the handsomest, as it has long been the best, of the musical reviews."
- "One of the very best of the musical journals. It is always wisely filled."

**EDITORS.**

WM. F. APTHORP, LOUIS C. ELSON,  
STEPHEN A. EMERY, WM. F. SHERWIN,  
GEORGE E. WHITING.

Managing Editor—E. TOURGEE.

THE MUSICAL HERALD is a monthly magazine, edited by the above experienced and practical musicians, and through its able editorials, its contributed articles, Reviews of New Music, Reviews of Concerts, Foreign and Domestic Notes, Musical Mention, Correspondence, Church and Sunday School Department, Questions and Answers, Eight Pages of Choice Music, etc., it appeals to and answers the needs of Teachers, Students, Cho. isters, Organists, Superintendents, Clergymen, Families, and all interested in Music.

**INDUSTRIAL EXHIBITION,**

1885,

FOR

**HOT WATER**

**HEATING**

**BOILER!**

Every Boiler Guaranteed.

MANUFACTURED BY

**E. & C. GURNEY**

COMPANY,

TORONTO.

**THESE BOILERS**

Are not only the cheapest manufactured, they are the best and simplest, being easily operated by any one competent to care for a hall stove.

We Solicit Examination by the Trade.

We call attention particularly to the construction of FIRE POT. It will be noticed by an examination of the engravings that between the fire and the iron containing the water there is a lining of brick, by the use of which we obtain a perfectly bright fire on the outer edge as well as in the centre, which is the great defect in all other Boilers,

**HEATING SURFACE.**

On examining the engravings it will be observed that the products of combustion, gases, heat, etc., after leaving the fire pot section are carried through a number of tubes into an expansion chamber, where, striking the bottom of the next section above, they spread to find their exit through another series of tubes to another expansion chamber, where they are spread as before, thus striking successively the bottom surfaces of five sections before reaching the final exit at the pipe leading to the chimney flue.

It will be at once conceded that heat applied in this way is much more effective than though applied to the side surface of cast or wrought iron pipe; a familiar illustration of this will be afforded by suggesting the relative value of fire applied to the bottom of a tea-kettle or to its side.

Write for circulars, and please mention this paper.
