rd through those wilds that for one  
150 years knew only the songs and  
uts of the "Courreurs Des Bois."

But returning to Manitoba again, I  
ould say, that between Lake Winni  
Manitoba and Winnipegosis, the  
try is generally a forest, as it is  
erally around the shores of all  
e lakes, also along the streams en  
ng into them. Along the  
Inneboine are heavy timber belts,  
cially on its south bank which, with  
along the Red, already spoken of,  
the generally timbered uplands of  
Riding and Pembina mountains,  
only protection against prairie  
to increase it largely; while  
is known to exist in the Riding  
Pembina mountains. So it will be  
that the

#### WOOD AND WATER SUPPLY

ample for all present and future  
ts of the Province—while as yet  
Manitoba is drawing but little on her  
fuel resources as most at present  
rafted down the Red river from the  
es.

#### THE SOIL

The Province being mainly of the rich  
black alluvium of the Red and Assin  
iboine Valleys, from four to eight and  
twelve feet deep, is unsurpassed  
ertility even by that of the famou  
ley of the Nile, while that of its  
the uplands is of a quick rich loam.
