T. B. COCKBURN,
PATENT FLAT WIRE LATHING
64 Canada Street, Hamilton, Ont.

ARCHITECTS AND CONTRACTORS:
Gentlemen: I take this opportunity of bringing to your
notice my Flat Wire Lathing, for which patents have
been issued in the United States and Canada. The ob-
ject of the patent is to provide a light, yet substantial
Fire-proof Lathing, which offers a smooth, unbroken
surface for the reception of plaster, and on which the
plaster will key securely. Being made of flat wire, it
offers the best plastering surface of any wire lathing.
The key is an absolute certainty and is obtained by the
plaster turning over the edge of the wire; this will be
found invaluable in the plastering of ceilings. Its many
advantages over Round Wire Lathing are apparent.
An adjustable foot made of sheet metal, having two
hooks, is attached to the lathing and takes the place of
furring. By means of these feet the lathing can be
fixed in position at one-half the cost of lathing requiring
furring. After the cloth is woven the feet may be at-
tached in any position required. The cloth may be used
in either plain or with the adjustable foot as shown in
cut.

**If you are
BUILDING**
Write us for a copy of our book on
"A TIN ROOF,"

AND OUR

FORMULÆ,

Containing full information about this
roofing; showing how to set, lay and
paint; and how to specify for a tin roof
in order to obtain best results.

Either or both Pamphlets sent
free of cost.

If your building needs ventilation, or
you are troubled from downward draughts
in your chimney, write us for information
