**What a Cement
Worker Wants
Is Results**

The Guaranteed National Produces Results

Here's Why

FIRST It must make the best block on the market—a block strong, true, of right proportions, made by the most approved methods, and with the face presenting such an artistic perfection as to delight the eye.

SECOND The mechanism of the machine must be the simplest possible to accomplish this result, in order to avoid repairs and wear of machine.

“Simplicity is the highest art of invention.”

THIRD The machine must produce results easily and rapidly, so that the cost of making blocks is at the minimum.

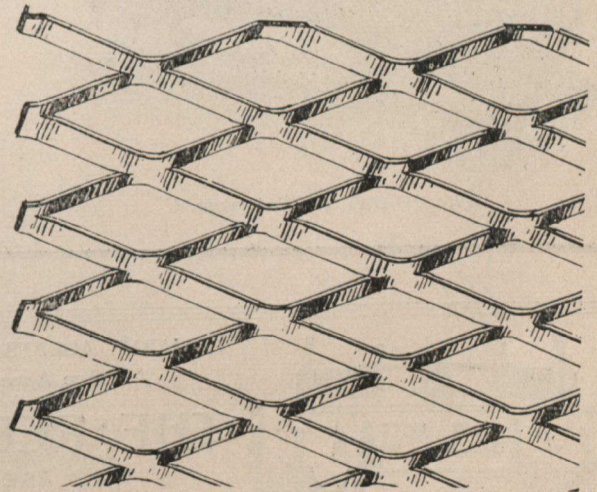

FOURTH It must be able to make all kinds, shapes and sizes of blocks needed for building and construction.
