

Quebec. These are voluntary, self-disciplinary organizations which consider complaints against newspapers. In the case of Quebec, the Press Council's scope includes broadcast as well as print media.

Canadian newspapers with the largest circulations* (Monday-Saturday):

<i>Star</i> (Toronto)	557,819
<i>Globe and Mail</i> (Toronto)	265,031
<i>Sun</i> (Vancouver)	243,823
<i>La Presse</i> (Montreal)	183,066
<i>Star</i> (Montreal)	190,349
<i>Le Soleil</i> (Quebec)	170,207
<i>Journal</i> (Edmonton)	168,692

Telecommunications:

Telesat Canada launched its 12-channel Anik (the Eskimo word for "brother") domestic communications satellite in November, 1972; the first of its kind among western nations. The satellite (with its back-up Anik 2), in fixed orbit, 22,300 miles high, has a life cycle of five years. The satellite provides television, telephone and other services using a system of 37 (later 54) earth stations.

Since the first telephone call by Alexander Graham Bell in 1876, Canadians have made much use of the instrument. Canadians have more telephones per capita (ten million), and make more telephone calls per capita (an average of 600 calls per resident annually), than any other people in the world. The eight largest companies, the main one being the Bell Canada, form the Trans-Canada Telephone System
