

NEW PUBLICATIONS, *printed for* J. S. JORDAN

STATE OF FRANCE.

The STATE of the FRENCH REPUBLIC at the End of the Year VIII. (1800) Translated from the French of Citizen HAUTERIVE; Clef de Relations exterieurs; by LEWIS GOLDSMITH, Author of the Crimes of Cabinets. Price Six Shillings, in boards.

“ We have given a copious detail of this work, not only on account of the high situation of the writer, in the Republic, and the evident views he had in its composition, but because it is a Publication of great Political sagacity, and is received with considerable approbation on the Continent. To every Statesman who considers the situation of this country in relation to the rest of Europe, (and, unfortunately, we have too few amongst us,) the perusal of this work must, in the present times, be deemed indispensibly necessary.”

*Critical Review, August, 1801.*

THE HISTORY of FRANCE, from the most early Accounts to the Death of LOUIS XVI. with a variety of Historical Engravings, from Original designs, in Four Volumes, 8vo. Price 1l. 4s. in Boards, By WILLIAM BECKFORD, Esq. Author of a Descriptive Account of Jamaica, &c. &c.

The HISTORY OF FRANCE, next to the History of England, is the proper study of all our youth; and it has this additional recommendation, that the records of no nation are better authenticated than those of France. In the history of no other nation does there occur such a variety of events; such instances of turpitude and honour; of adversity and splendour—all that can interest the passions, arrest the attention, affect the tenderness, excite the detestation, and call forth the admiration of the world, are to be found in the History of France. We naturally desire to become acquainted with the history of a people, who, for ages, have been the greatest examples of ambition—in the attainment of power, and the dissemination of taste. Eminence has been their ruling passion—in Civilization, in Science, and in War. Their circumstances attract our attention to their original state, their progression of advancement, their meridian, and their declension; in all which we shall find abundant matter for imitation, and numberless beacons to warn us of danger.
