## PEERLESS PERFECTION

**THE FENCE THAT  
STAYS "PUT"**

**Peerless** Perfection  
is one of the easiest  
fences to erect, because  
it stays "put." It can be  
erected over the most hilly  
and uneven ground, without  
buckling, snapping or kinking.  
Every joint is locked together  
with the well-known "Peerless  
Lock." The heavy stay wires we use pre-  
vent sagging and require only about half as many posts as other fences.

## Peerless Farm Fence

is made of the best Open Hearth steel fence wire. All the impurities  
of the steel are burned out and all the strength and toughness left in.  
Makes the fence elastic and springy. It will not snap or break under  
sudden shocks or quick atmospheric changes. Our method of galvaniz-  
ing prevents rust and the coating will not flake, peel or chip off.

Send for catalog. It also describes our farm gates,  
poultry fencing and ornamental fencing.

## An Attractive Small Home

**Farm and Dairy House No. 2 is a Pleasing and Compact Little Home**

**T**HIS is Plan No. 2 of a special series that Farm and Dairy has prepared for Our Folks by an experienced architect. Into these houses we have put our own understanding of farm conditions combined with the special knowledge and skill of an able architect. In our opinion the result is a unique collection of moderately priced houses, possessing the qualities of practical utility and charm to an unusual degree, and coming as they do at a time when lumber and labor are exceptionally cheap they should prove especially acceptable.

House Plan No. 2 is a very simple but delightful little bungalow consisting of four rooms and a wash room.

The back door, which is generally family door and company door, and

practically the only door in use during the winter months, opens into a small back hall, with a view straight into the living room. It was so arranged in order that it should not be necessary to usher guests through the kitchen before reaching the living room. To the left of the entry is a small wash room where the men, coming in from the field, can wash up and leave their dusty smocks, without interfering with the busy housewife.

The living room is a very pleasant place, with a big bow window at one end and glass door and windows at the other, opening on to a pretty little porch.

This house is almost ideal in its

complete fulfilment of all the requirements of the small farm cottage. Planned on the bungalow model, it is all on one floor, and is the first saving necessary in a well planned house, viz., saving in steps.

The main or family living room is the centre of the house and controls all the balance of the rooms. The front entrance enters this room directly from the front porch and a comfortable bow window, that will give all sorts of encouragement for winter powers, looks out onto the activities of the farm yard. As right as we enter the living room are two bedrooms, one 9 ft. x 10 ft., and the other 10 ft. x 10 ft., each with a commodious closet. There is also a linen closet off the living room. On the opposite side is the kitchen, with entrance off the rear entry and also off this same rear entry, a small store room, large enough to contain all the outdoor boots and clothes and large enough to do the washing in if necessary. There is a small rear porch which should prove a boon to the women of the family if it is screened. The outside dimensions of this house are 24 ft. x 34 ft., the floor edge grain fir, the finish plaster, heating hot air, the trim simple plaster trim stained.

The foundation can be concrete or stone, as the circumstances warrant, as there is very little difference in the cost. A fireplace might well be added at a very little extra cost to the without making any change on the plans.

The roof may be of wooden shingles, metallic or composition. The two latter will increase the cost but, in addition to wearing longer, will have the great advantage of being fireproof. The walls may be of shingle or six-inch siding, without difference in cost. Stain or paint the roof (if wood) a dark bluish green and the walls a soft gold. The trellises and the trimmings should be painted ivory.

The cost of this house complete, including heating, according to the locality, will range from \$1,500 to \$1,750. This estimate includes a real heating system, not a stove in the living room, another in the kitchen and no real comfort anywhere.

**COST OF WORKING DRAWINGS**  
Many Farm and Dairy readers will desire to build this house for their own. In order to help them we have arranged to provide the complete working drawings and complete bill of materials (by which any experienced carpenter may erect the house even as it is described) for the small sum of \$1.50. O-dinarly such plans cost from \$10 to \$15. Minor changes may be made in the plans by the carpenters if desired. Address all orders:
