AUSTEN BROTHERS,

MINING.

Gold mining is steadily progressing in this Province, but the industry is still far from attaining the proportions that it is destined to assume. New districts are constantly being discovered by skillful and persevering prospectors, not the least important being the finding of gold in the leads in Cape Breton. Mr. Graham of Brockfield, who had considerable experience in California, has long been quietly at work in the Stewiacke Valley, and as a result of his labors a gold district extending for miles up the north side of the valley has been discovered. Its value has yet to be determined, but all indications point to the fact that Mr. Graham has unearthed a district of incalculable richness. The other inland districts, such as Caribou, Moose River, Central Rawdou, Renfrew, Oldham and South Uniacke, are being rapidly developed, and in all cases success is rewarding the efforts of skilled miners. In Queens County a number of enterprising American capitalists have invested heavily, and the purchase by them of the Molega Mine proves that they are anxious to secure as many good properties as possible. We need say nothing of Halifax County, as the large returns from Montague, Lake Catcha and other districts speak louder than words. In fact look where one will the gold industry will be found in a thriving condition.

MILLIPSIGATE.—We had the pleasure of a visit from Capt. John Walters, who is now engaged in floating a company in England to work the rich leads at Millipsigate just outside of Bridgewater. The Captain has the best of English connections, and his negotiations are now so well advanced that it seems probable that work in the Millipsigate District on a large scale will soon be begun.

TANGIER.—The Sussex property in this district has been purchased by a syndicate with, we understand, the intention of treating the tailings and ores by the concentration and chlorination process. Mr. Cossee is still at work for the Brunswick Company and is meeting with fair success.

The following are the official gold returns so far received at the Mines office for the month of April:—

District.	Mill.	Qtz. Crushed.	Ozs. Gold.
* "	Sutherland	00	26 1 31
	Dutserin		203 3
	Oldham G. M. Co		1013
Mooso River	D. Touquoy	450	53 ๋

Harrigan Cove	N. B. Mill	15	1}
	Truto G. M. Co		14
	Whiteburn G. M. Co		120₹
• Sand and dump.			

Wonderful Gold at Whiteburn.—From what we have seen with our own eyes we are satisfied that the talked of strike in the west Dunbrack lead in the Graves Mine is a certainty. We were shown a number of beautiful specimens, almost entirely gold, each piece having two or three ounces of the finest gold that we have ever seen. From what information we can gather we understand that it was struck at the depth of about eighty feet, and from present appearances will prove the most continuous of any strike yet made. So rich is the ore that when taken down many perfectly clear nuggets of gold are picked up. The future prospects of this mine are certainly encouraging. We also understand the Cole and Centre veins upon this property are fast improving, as fine sights are now being taken out. The Mill runs steadily night and day with better results than ever made before.

Mr. Gilbert Parker and other American capitalists have just bought the famous McGuiro Mine at Whiteburn. Thirteen hundred tons from this mine have produced \$108,000 gold. How is that for Queens County? Improvements will be put in at once to make this a great producer. Had we more men like Mr. Parker this would be one of the busiest mining camps in N. S., and we doubt if such specimens of gold ore as we can produce can be found anywhere outside of little Nova Scotia!—Gold Hunter.

A GREAT MINING COUNTRY.—" Canada will," says Mr. Ahn, of the Dominion Gold & Silver Reduction Co., of Algoma, "develop, in the course of the next year or two, into a great mining country. The mineral belt starts at Nova Scotia, traverses the Quebec district where there are numerous phosphates, and then continues its course to the silver belt at Port Arther, where there is more hidden wealth than was ever dreamt of in Old Mexico. Going westward still you get to the gold-bearing lode in the neighborhood of the Lake of the Woods. Then it seems to break off, and northward, near Winnipeg, you get into the argentiferous galens. "In Sudbuty," added Mr. Ahn, "there is, I believe, a greater combination of metals than there is in any other part of the world. The quantity of platinum there is absolutely fabulous, and is a mineral of great value now, for it has more than doubled itself within the past few years." There are auriferous deposits at Theesalon, 40 or 50 miles west of Sudbury, worth thousands of dollars to the ton. New finds are being continually reported, and copper is to be found in great abundance."
