QUALITY COUNTS
That is why GOLD SEAL and COOK'S PRIDE Flour leads. Manufactured by BENNETT BROS. Cor. Market and Park Streets. Phone 1417.

COBALT NOTES
Mr. J. H. Jewell, of J. H. Jewell & Company Toronto, said yesterday that development work has progressed rapidly on the Erie, as there was no strike on it.

Word was received in Toronto yesterday of the find on the Lorraine property of the Erie-Cobalt Mine of a new vein of calcite. It runs north and south, crossing the other veins at about right angles. The calcite network is 12 veins, and the lode is expected to be found along the intersecting points of the old veins with the new one.

George C. Campbell, manager of the Cobalt-Nipigon syndicate, which recently purchased 50 acres in Ontario, says that during the period of depression of the past six months, the syndicate has accumulated property in the northern districts, and it now owns and controls over 1,500 acres within a radius of four miles of Cobalt, and it is continually adding to the holdings.

The shipments from the mines at Cobalt to the smelters at Sudbury, amounting to 300,000 pounds, in six carloads, according to the report of the officials of the Peninsular and Northern Ontario Railway. The details are as follows: La-Rose Mine, two cars, 60,000 lbs.; Conlags, two cars, 120,000 lbs.; Buffalo Mines, one car, 60,000 lbs.; Nova Scotia, one car, 60,000 lbs.

Silver that is not in frequent use will not tarnish if rubbed with oatmeal. A hot salt bath just before retiring is recommended in cases of nervous restlessness. As far as possible children should have separate beds, even if two are in the same room. The sleep will be sounder and more refreshing. A quick and easy way of cleaning muddy boots without injury to the leather is to fasten a strip of old felt or soft carpet to a piece of wood and use it as a boot brush. A child suddenly awakened from a deep sleep is generally fractious for the rest of the day, so be very careful to guard against any violent noise. Let it have its sleep out, and it will wake in a most angelic humor. Keep a little package of absorbent cotton in one of the sideboard drawers. If oil, milk or cream is spilled on a woollen dress or cloth a bit of the cotton instantaneously applied will remove all traces of the stains. In order to succeed you must be sure of two things: you must love your work, and you must not always look over your shoulder. In wanting your plan to begin, you must not be ashamed of your work and wanting to be doing something else. Paper "china" is now on sale in England, including plates and dishes, unbreakable and cheap, tiny plates costing no more than a penny a dozen and cheaper by the hundred. A paper tea set for three and four persons packed in a box costs only tenpence. When you awake in the morning yawn several times. It opens the throat and starts vibrations. Stretching sets a sluggish circulation in full pace; it wakes up sleepy cells and hustles out old tissues; it keeps stiffness at bay and prevents your joints from getting bent to stay. Here is a delightful little salad which should be tried while green peas are young and tender. Have ready one large bowl, let a pint of cold peas which have been boiled (not to a mash) with a good sprig of mint. Wash and swing the lettuce till dry in a cloth; break it small, put it in your salad bowl, and sprinkle the peas in among it. Pour over one salad spoonful of tarragon and malt vinegar mixed, with a dash of pepper and a little salt stirred into it; mix lightly, and then add two salad spoonfuls of good Lucca oil. Mix again lightly, and serve in ten minutes. "I suppose 'D. D.' stands for 'Doctor of Drunkenness' 'Usually,' but not if they're two small 'de's' with a dash between them. Sorrows' best antidote is employment. —Young.

LOTS FOR SALE
BEULAH SURVEY
Aberdeen, Cottage, Beulah, Mount Royal avenues and Garth street. Lovely southwest section. Latest improvements, graded streets, sewers, and cement sidewalks laid out and ready for city water, natural gas, electric light; proper building restrictions. These are choice lots, too, all laid out and ready for building upon, in most desirable locations for homes sites, or investment. Values of our properties are certain to rise, as the vicinity is being rapidly developed and built upon. For homes or lots in this survey call upon the owner.

MARKETS AND FINANCE
W. D. FLATT, Room 15, FEDERAL LIFE H. H. DAVIS, Manager PHONE 635

Stocks and Bonds
(Received by A. E. Carpenter from Ennis & Stoppant)
The market during the morning had a severe attack upon Copper issues, subsequently explained by the reduction in Calumet and Hecla dividend. The companies paid \$30 per share in 1905 in quarterly instalments of \$10 and \$15, and last year paid \$15 each in March and June, and \$20 each in September and December, the total thus being \$70 for the year. The dividend to-day is \$15. This reduction will naturally call attention to the position of Anaconda, the dividend meeting usually occurring about Sept. 23. The Lennox failure at Lynn, Mass., is said to reach \$2,500,000. The Belding Hall Manufacturing Company failure of about \$500,000 is probably due to a recent large defalcation by an official. These disagreeable results, in so far as they arise from business reversion, are not an unmitigated evil. Through such events money must eventually be gathered. The July statement of Reading, with the decision in the case of the Pennsylvania Railroad against the County of Philadelphia, declaring the State 2-cent fare law unconstitutional, decision being rendered by the Court of Common Pleas No. 4, constituted bullish developments, temporarily somewhat obscured. New York City bonds when issued sold on the curb at 103 1/2. London traded both ways, selling on balance. The market promises irregularity. Large interests say the worst of the monetary stringency is over.

THE WORK OF CORN BREEDING, As Conducted by the Canadian Seed Growers' Association.

(Extract from the last Annual Report of the Secretary.)
The work of corn breeding in Canada, though limited chiefly to Southern Ontario, has made material advance during the past year. Not only has the number of growers largely increased, but the general public is beginning to realize more than ever before something of the nature and importance of this particular branch of work, and as a result the demand for specially grown seed corn has increased. Keeping in touch with the individual growers, we have been able to notice a substantial growth of intelligent interest on their part, until we now feel assured of the success of the work and what it will mean to the Province. Moreover, the actual information that has come back to us from the work carried on by the different growers, has added very materially to our present knowledge of the problems of corn breeding, and we are thus enabled to work to much better purpose.

Since the last Annual Report of the Secretary... The system of corn breeding which has been adopted by the Association and which may be found in the second Annual Report, page 59, under the section entitled "The Row System," has for its basis the ear-row test. Each row of fifty or more hills in the plot is planted with corn from a separate ear, which arrangement gives each ear an opportunity to show the breeding which is behind it and to which it may be traced. The most amazing variation in the productive capacity and vigor of each ear, as revealed by this system when carefully carried out, has gone far to promote a greater interest in the work. In all the plots operated with according to this system, a decided variation was found to exist between the different rows in respect to vigor of growth, yield, etc. By this arrangement, the top-notchers—the best rows—may be located, and the best plants within these best rows chosen as mother plants from which to select the seed ears for the plot of the following year.

Since the last Annual Report of the Secretary... Since Western Canada comes within the northern limit in which corn can be grown in America, and since the growing season is very short, an early Flint variety must be looked for. Experience has shown that by careful work these early varieties may be made to produce crops which pay well for the time and labor expended upon them. It is a common practice to take some of the earlier, gent varieties and endeavor to adapt them to the conditions in the north. We believe this to be wrong, and advise those of our members in the west who desire to do something along this line to begin with corn grown as far north as possible, and endeavor to improve upon this. A large number of stalks, each bearing at least two smaller ears, should be looked for per acre, instead of trying to develop the size of the ear.

RIGHT HAND OR BOTH HANDS.
Four-fifths of the Babies Said to be Ambidextrous.
Many reasons have been advanced for the prevalence of righthandedness. It is by some said to be the result of nursing and infantile training, to be due to the outcome of warfare, education and heredity, the result of mechanical law and other remote causes, according to the Strand. Sir James Sawyer declares that the preferential use of the right hand is due to the fact that in primitive days man used the right hand for the purposes of offense, so as to keep the heart—the vital spot—as far as possible from the assault of an adversary. Recent experiments and observations, however, prove that single handedness is merely the result of faulty or restricted education.

It is a curious instance of human contrivance that should one eye, one ear or one leg of a child show signs of mechanical vigor the parents would instantly seek the cause of and if possible the remedy for that lamentable condition; yet for some inexplicable reason or prejudice the left hand of the average child is ruthlessly and deliberately neglected until in mature years it is an undeveloped, useless and almost unnecessary appendage.

Careful observations have shown that out of every hundred persons born into this world eighty are congenitally ambidextrous—that is to say, they will instinctively reach for an object with either hand and only require proper instruction and training to develop both hands and arms to an equal degree of strength and skill.

Of the remaining twenty seven will be right handed, while the other three will show a natural bias toward the left hand. The cultivation of ambidexterity in children offers no insuperable difficulties, and the economical, physiological and psychological advantages are enormous.

It is said that the Japanese soldiers can use their weapons with equal skill in either hand, for they are trained to be ambidextrous from childhood. At school they are taught to write and draw with both hands. In drawing and painting no supporting device whatever is used, the entire arm being employed.

THE USES OF COBALT.
Investigations of Thomas A. Edison make cobalt important as a metal. Mr. Edison states that he has discovered a method by which it can be used in the manufacture of storage batteries in place of lead.

WON'T STRIKE.
Chicago, Sept. 10.—Telegraph operators working under contracts with brokerage firms and newspapers will continue at work. This decision was reached at a meeting of such operators held last night to discuss a petition which had been circulated asking that the local executive board call out all union operators on a work regardless of contracts or agreements signed since the beginning of the strike.

BELONGED TO OTHERS.
Gabbler—Is that loving couple on the corner married?
Blabber—Yes, but not to each other.
