

TAKA-DIASTASE

POTENT STARCH-DIGESTANT

Three-fourths of all cases of dyspepsia, it is said, are of the amylaceous variety. TAKA-DIASTASE is the physician's most eligible agent in this class of ailments. It is the most powerful digestant of starchy foods of which we have knowledge.

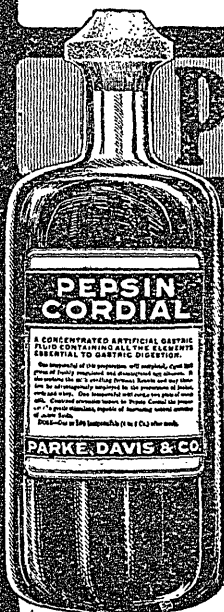

SUPPLIED IN POWDER, LIQUID, CAPSULES AND TABLETS,

and in a variety of combinations with other agents.

PEPSIN CORDIAL

PRESCRIBE IT IN INFANTILE INDIGESTION

PEPSIN CORDIAL combines the characteristic properties of pepsin with the other ferments naturally associated with it in the gastric fluid. It possesses marked proteolytic activity.

One fluidrachm will digest 3000 grains of coagulated and disintegrated egg albumen.

PEPSIN CORDIAL contains a small percentage of wine, which imparts a pleasant flavor and renders it gently stimulating. It is pepsin in its most palatable form—an admirable agent for administration to infants, young children and fastidious patients of older years.

Specify "Parke, Davis & Co." when ordering or prescribing.
