Marketing Profile

Bonar Inc., Machinery Division is the packaging machinery arm of Bonar Inc., a principal manufacturer of flexible packaging and rotationally molded plastic products.

The company offers complete packaging systems, mainly in the flexible packaging segment.

Sales of Bonar proprietary equipment are handled directly or through agents in the United States and overseas. The equipment or systems offered are restricted to areas of particular expertise.

The Bonar Intermediate Bulk Container (I.B.C.) Weigh Fill Systems is designed for filling bulk bags or other large containers and is available for single stage manual, semi-automatic or automated and custom installations to meet specific requirements. With over fifty systems either installed or on order and with approximately one-half of these outside Canada, Bonar has a strong track record of successful systems in operation.

For smaller packages Bonar offers its line of Automatic Plastic Bag Filling and Closing Systems. The BAG-MASTER FS makes its own bags from plastic roll stock. The small compact machine is easy to adjust within a range of bag sizes. For completely automatic operation, the machine in these lines can be supplied with electronic weight scales and feeders.

A BAG-MASTER is also available to suit pre-made wicketed polyethylene bags.

Products/Services Available for Export:

Intermediate Bulk Container Weight Filler
Automatic Plastic Bag Filling and Closing Systems
