

Dimensions—Height, $2\frac{1}{8}$ inches; depth, back to front, $1\frac{3}{8}$; width across shoulders, 1 1-16. Stem hole conically bored in back $\frac{1}{4}$ inch in diameter and $\frac{1}{2}$ inch deep. Bowl being more of an excavation than a boring, showing tool marks as of "gouging" and is a rounded cavity 1 11-16 by $\frac{5}{8}$ inches deep.

Human Figure Pipe, Holland Landing. This pipe was found at Holland Landing by a man in the employment of Capt. Jaques, now of Briercrest Farm, Drinkwater, North-west Territory, in a letter from whom, bearing date of the 27th of June, 1902, he states that he has forgotten the name of the man who found the pipe, and the year of the finding, but that it was found in the water at a little distance from the

shore. The present owner does not know any particulars about it. The specimen has been called the "skeleton pipe" on account of the legs and arms being separated from body. Material, greenish-grey soapstone. Surface well polished, and as in the Long Point pipe the hands and feet are not brought out, and the facial features are very rudely formed; the eyes being saucer-like depressions and the nose and mouth defined by lines. The face is flat. The stem-hole is in the middle of the back and is surrounded by a raised orifice. The posture is a sitting one on a projecting base, with arms folded across the knees. The upper part of the arms is separated from the body, and the upper part of each thigh is continued in a ridge around the bowl to the lower part of the stem hole. Dimensions— $3\frac{1}{4}$ inches high, width across shoulders $1\frac{1}{2}$ inches, depth from back to front $1\frac{3}{4}$ inches.
