An inspection of the samples will convince you that the prices are

Farmers! Do your wife a favor and purchase one of The Wortman & Ward Mfg. Co.'s Revolving Barrel Churns.

This Churn has been in the control of the control use over twelve years in the United States and six years in Canada, and has steadily grown in favor wherever its merits have become known. It has given more solid and universal satisfaction than any churn ever placed on the market. It makes more butter, and of a bet-ter quality, than the old churns. The cream is

it receives from the revolution of the barrel, instead of whipping a part of it at a time with a dash or paddle, as in the old style of churns. It is washed from side to end and from end to ide, and is thoroughly changed and mixed through at every

revolution of the Churn.

Those who have used the Revolving Barrel Churn say their buttermilk looks poorer and thinner than when they used the old dash or paddle churns, corroborating our statement that with this principle of churining there is an increase of the quality, as well as the quantity, of the butter. As every particle of cream is subjected to the same agitation, the globules are all freed at the same time, converted into butter, and saved by a much larger percentage than by the old method. The grain of the butter is better preserved, as there are no dashers or padthe butter is better preserved, as there are no dashers or pad-dles to pound and destroy the globules, thereby making the butter soft and sticky, like lard, such as is often seen in butter made in a dash or paddle churn.

Butter made with the Revolving Barrel Churn is not streaked or salvey, because the cream is all churned alike, the butter-milk thoroughly washed away while the butter is in a granular Having bought a car-load of these churns at low figures we offer them much below the manufacturer's list price as follows: No. 1-Nine Gallon Churn, churns from 1 to 4 gallons No. 2—Fifteen Gallon Churn, churns from 2 to 7 gallons cream No. 3-Twenty Gallon Churn, churns from 3 to 9 gallons

No. 4-Twenty-five Gallon Churn, churns from 7 to 12 No. 5-Thirty-five Gallon Churn, churns from 10 to 16
