

## INVEST IN "IDEAL" FENCE

Money used in the purchase of "Ideal" Fence is not spent—it is invested. When you invest a dollar in "Ideal" Fence you get a dollar's worth. You get full value for your money because "Ideal" Fence is made exactly as represented and described in our catalogue and all our advertisements. When we say "Ideal" Fence is made of No. 9 gauge wire (which is one hundred and forty-four one-thousandths of an inch in diameter), it is full size No. 9; if anything it will average over full size.

When we say the uprights or stays on "Ideal" Fence are 16 1/2 inches apart, they are 16 1/2 inches, not 18 or 20 inches, and the same with 22 inch spacing.

A fence can be greatly cheapened by using under-gauged wire or having the stays farther apart than advertised. From top to bottom "Ideal" Fence is all the same, made of large gauge, No. 9, evenly galvanized hard steel wire—no small or soft wires—all are full size, true to gauge, tough

and hard. The reason that there are more miles of "Ideal" Fence sold in Canada annually than any other make is not due to salesmanship or advertising, but it is due to the merit of the fence itself, to the quality of material and workmanship that enters into it, to the protection it affords, to the service it renders and to our many satisfied customers all over the Dominion. Do not experiment in buying fence; it will not pay you. If you buy "Ideal" you are absolutely sure of getting a fence exactly as represented. We invite you to compare "Ideal" Fence with any and every other make on the market. Compare the size of wire; compare the weight to the rod of fence; study the quality of workmanship; test it—test it in the severest way you can think of, and you will find "Ideal" to be superior in every way. Do not spend money in buying fence—invest it in "Ideal".

A postal card will bring you the "Ideal" catalogue #31, which shows many different styles of fence—a style for every purpose; also our complete line of Field and Stock Gates, Lawn Fence and all fences supplies.

The McGregor Banwell Fence Co., Limited, Walkerville, Ont.

## Growing and Ensiling Corn.

The lack of confidence in the value and use of corn silage is gradually being overcome. According to J. H. Grisdale, Director of Experimental Farms, who has tested the matter in many parts of the Dominion, corn for forage or ensilage can be grown to advantage in almost all parts of Canada occupied by stock farmers. Failure to secure satisfactory results has often been due to wrong cultural methods practiced, or unsuitable varieties grown, rather than to adverse climatic conditions.

In order to secure for the benefit of stock-growers generally, reliable information on the subject of corn ensilage, Mr. Grisdale was summoned by the Select Standing Committee of the House of Commons on Agriculture and Colonization, to give evidence based on his experiments and observation. This evidence was printed in a pamphlet of sixteen pages, and sent out in large numbers, but there are still available for distribution a number of copies in the hands of the Publications Branch of the Department of Agriculture at Ottawa.

Corn will do well in almost any kind of soil provided with good drainage and well prepared. Barnyard manure, which may be applied during the winter or spring, is the best fertilizing material to use. From the middle to the end of May, according to the weather and soil conditions, is said to be the proper time to plant the seed, which may be put in hills or rows. After describing the necessary cultural operations, varieties suitable for various Provinces and districts are named. For the more northerly latitudes, Longfellow, Compton's Early, Angel of Midnight, North Dakota Flint, and Sanford, are recommended. Harvesting and ensiling are fully described, and feeding is dealt with also. For feeding young stock, some bran and clover hay should be added to the silage. Rations are given for all classes of cattle.

In discussing silos, a table is embodied which shows the capacities of those of different dimensions. A hundred-ton circular silo is shown to be 27 feet deep, and 16 feet inside diameter. Silos of different materials are dealt with, and their construction described. Cement silos, properly constructed, are referred to as being probably more durable and satisfactory than those built of wood.

## Trade Topic.

Many horses are troubled with worms and bots. Newvermifuge, advertised elsewhere in this issue, is said to be an effective and absolutely harmless remedy, removing the worms from the body, dead, in from 18 to 24 hours. If your horses are thin, and worms are suspected, see the advertisement, and correspond with the Farmer's Home Remedy Co., 592 7th street, Milwaukee, Wis.
