#### **ELECTRIC ANI** MUST BE I

Engineer Places Report Both Are Already Ta

(Saturday's Daily) Two reports placed before the council last night by the city engindicated that the city has reached point where the population has taken the water and light services something on a much larger than anything heretofore contem ed must, be undertaken at once i city is to avoid a water famine year, with its attendant possibil of devastation by fire. And if electric light plant is to meet the mands that will be made upon it in the next year, even excluding the consideration the demands that be made upon the plant for power the street railway, not a day is t lost in placing orders for new In fact as the report indicates, city is going to be short of light a couple of months next year a way as the present rate of increase the applications for light service is rapid that the demand will overtake supply before the new plant can be stalled. The amount of light useddoubled within the past year and th is every reason to believe that it more than double again withinnext. The plant is already worki to its load limit on Saturday nigh On the 1st of January the city's co tract with Strathcona will run after which the city will have a si plus of power for a few months, t the respite will be only brief. On the water proposition, the c has long since passed the safe lim where the pumps represented a dupl

cate plant. Should the large pum break down at any time the smal pump could not supply the city an situation, in case of fire, would be dangerous if not disastrous. To hel tide over this contingency until suc time as the city may instal the new plant, the council last night authorized the commissioners to make an arrange ment with Strathcona to connect by pipe line laid under the river the E monton system with the pumping station across the river. The arrangement, of course would be reciproca each town helping to protect the other the cost would be \$6.000

The reports of the engineer were favorably considered and referred back for further decards. He is to furnis the council with specifications of th power plent resided of oil ticulars regarding the proposed water plant such as length of main, levels pressure at different points on the city's system. The location of the new s, as proposed by the c engineer, is almost due south of 21st street, on the south west corner of the south east quarter of sec. 36, range 25, township 52, and calls for two 16inch mains one and one half miles long The following are the reports in

The following report is intended to show the present capacity and condi-tion of the Electric Light Station and also the necessity for extending the same in the near future. The present plant has a capacity of 675 KW in two units of 450 and 225 KW. each. There is at present a maxthan a load for either machines sep-
