

## DEATH TO DANDRUFF GERMS LIFE TO ALL HAIR

No More Dandruff, Falling Hair, Scalp Itch, Bald Heads or Dull, Faded Hair.

This is a free country. It's your right, your privilege to use any hair tonic you desire.

But why continue to use a hair tonic that doesn't do what it should do: kill the germs and banish all dandruff and hair troubles?

If you have dandruff, if your hair is getting thin and falling out, if your scalp itches and your hair isn't bright and lustrous, bear in mind this fact; that PARISIAN SAGE, now sold all over America, is guaranteed by T. B. Taylor & Sons to give the limit of satisfaction if

used for any of the above hair or scalp troubles, or money back.

PARISIAN SAGE is the most delightful and refreshing hair dressing for men, women and children, and is particularly in demand by refined women who desire to increase their beauty by acquiring an abundance of fascinating hair, full of life and lustre.

A large bottle of PARISIAN SAGE costs but 50 cents at T. B. Taylor & Sons, and druggists everywhere. The girl with the Auburn hair is on every carton and bottle.

### IT'S COMING

What's coming? Why Seedtime, then the Harvest but the Harvest depends very largely on the quality of the Seeds you sow. Our Catalogue for 1912 is bigger and better than ever. Tells you all about over 1,500 kinds of Field Roots, Grains, Vegetables, and Flower Seeds, Small Fruits, Flowering Shrubs, Plants, Implements, etc.

If you cut this out sending it to us with your name and Post Office Address our Catalogue will be sent you and a present with it. Do it to-day. ADDRESS, Darch & Hunter Seed Co., Limited, Dept. 73 London, Ont.

## SPIDERS AS ARCHITECTS.

Wonderful Webs Are the Result of Evolution.

One who is desirous of studying the architectural gifts of spiders may easily do so by observing the labors of the little garden spider common to all localities. These beautiful webs, circular in outline, with radiating threads running from centre to circumference and supporting a series of concentric lines, are regarded by naturalists as the highest achievement of the spider.

How did the spider learn the art of making these webs? Their great ingenuity and perfection of geometric form are conceded. The naturalist is not satisfied with the reply that it is a matter of instinct. He learns that there are wide differences to be found among the webs of different spiders, and his observations lead him to think that he can discern a sort of actual progress, which he calls evolution, in the art of web making among spiders.

The common house spider spins a web quite different from that of the garden spider. The house spider's web consists of a silken tube hidden in a dark corner, with an irregular sheet of closely woven meshes spread before it. The tube is the spider's lurking hole and place of refuge; the outspread web is its snare. The wolf spider makes a tubular hole with a hinged door for a refuge, and spreads no snare, relying entirely on its own prowess to overcome the unsuspecting victim. Still another species of spider constructs a far simpler tube without any lid or door.

In all this there may be discerned some resemblance to the progress or architecture among men. The earliest representatives of the human race were content to dwell in caves and rudely constructed huts. Then more elaborate dwelling places and buildings intended for other purposes were constructed, until, by successive steps, advancing, as has the spider, we have arrived at the temples, palaces and houses of civilized life.

### He Makes Vienna Gasp.

Vienna can boast a curious eccentric who turns life upside down, a rich young Pole who lives in sumptuous style, but always summons his servants by bugle call. His favorite pastime is driving, an omnibus, attired like an ordinary bus man, and, though he is said to spend a fortune each year in clothes, he wears no garment until it has been worn by his valet. He has astonished guests at a ball by appearing in a costume of pure white, save for the shirt and tie, which was black. To complete his oddities, when dining, which he invariably does alone at a table d'hote, he reverses the usual order, beginning his meal with the sweets and ending with the soup.

**GOOD DIGESTION SHOULD WAIT ON APPETITE.**—To have the stomach well is to have the nervous system well. Very delicate are the digestive organs. In some so sensitive are they that atmospheric changes affect them. When they become disarranged no better regulator is procurable than Parmelee's Vegetable Pills. They will assist the digestion so that the hearty eater will suffer no inconvenience and will derive all the benefit of his food.

## EDUCATION OF A PRINCESS.

Elizabeth Stuart Played at Being Queen From Infancy.

The home life of King James I. of England had much that was charming about it. In his "Five Stuart Princesses" Robert S. Rait gives many pleasant glimpses of the upbringing of the little daughter, the Princess Elizabeth, afterwards Queen of Bohemia, and ancestress of the present royal house of Great Britain. The child was but seven when her father was called from his Scottish throne to that of England. Two days after the installation at Windsor, writes Mr. Rait, the small Elizabeth watched a state dinner from a recess in St. George's Hall.

James took his daughter up in his arms and kissed her, joyfully saying to Lord Southampton that his little Bessy was not an ill-favored wench, and might outshine her mother one of these days.

As life at the court proved too hard for the little lady Lord and Lady Harrington were appointed to educate her in Warwickshire. There the princess' room looked over brilliant flower beds, across a green English lawn to an artificial river that disappeared into the woods.

"Nothing took the princess' fancy so much," wrote one of her ladies, "as a little wilderness at the end of the park, on the banks of a large brook which formed in one place a large irregular basin, or rather a small lake, in which there was an island covered with underwood and flowering trees and plants, so well mixed and disposed that for nine months in the year they formed a continual spring."

This "wilderness" the princess took for her own, and here in an aviary the black roof of which was formed of natural rock, she brought together birds of "every species and of every country." In the wilderness and wood Lord Harrington built "little wooden buildings in all the different orders of architecture," and in these were placed "paintings of divers races, and stuffed skins of all sorts of animals, so that this was a kind of world in miniature. Adjoining the wood were some meadows, which were afterwards added to what the princess called her "territories," and those she called her "fairy farm," from their being stocked with the smallest kind of cattle from the Islands of Jersey, Shetland and Man.

Elizabeth's studies were conducted somewhat after modern kindergarten methods. The greater part, the instruction, this is, was imparted informally and without being obtrusively labeled "work."

For example, the learning of history and geography became a game in which picture cards had to be shuffled and arranged correctly. "If a butterfly or a glow worm took her eye some account was given her of its nature and of the wonderful changes most of its kind go through." The children loved to look at these insects through the newly-discovered microscope, or at the stars through Lord Harrington's wonderful telescope.

At other times the birds and flowers were used to suggest moral lessons. Happy days were these for Elizabeth, days beginning early with visits to her "fairy farm," filled with an abundance of fresh air, as the princess on her "territories" tended her pets or adorned her grotto with moss and shells and ending with music or dancing.

### One Use for Steam.

"Papa," said the hopeful youth, "can you tell me what is natural philosophy?"

"Of course I can," said papa, proud and relieved to find that there was at last something he could tell his offspring. "Natural philosophy is the science of cause and reason. Now, for instance, you see the steam coming out of the spout of the kettle, but you don't know why or for what reason it does so, and—"

"Oh, but I do, papa," chirped the hope of the household. "The reason the steam comes out of the kettle is so that mamma may open your letters without your knowing it."—Answers.

### Poisons In Foods.

In nearly all our condiments we eat poison. The oils of nutmeg, cloves, black pepper, cinnamon, peppermint, caraway, horseradish, thyme, etc., are all poisonous in large doses. Black pepper contains a fiery volatile oil, capable of burning a hole in your stomach if it was not moved on, while its piperine is a sure poison. Cayenne pepper is still more irritating.

### Not Satisfied.

"Well," said the Billville neighbor, "I reckon your John is satisfied now that he's safe in congress."

"No," said the old lady, "just as soon as he gets his shoes polished, puts on a billed shirt and takes a ride in a ortemobile he'll wonder why it didn't occur to him to run for president."

### First Tram Line In England.

The first tram line ever laid down in England can still be seen at Bellvoir Castle, where the Duke and Duchess of Rutland have been entertaining a succession of parties. The line was constructed nearly a century ago for conveying materials when the castle was being rebuilt after the fire.

## OVER-WORKED KIDNEYS

Cause. Rush of Blood, Fullness, Dizziness.

J. T. Chetland, the well-known railway engineer of Hamilton, found the strain always resting upon men of his occupation vastly intensified by a tendency of the blood to rush to his head, and often at times when clearness of vision and great steadiness were demanded. Finding some difficulty in bending—a stiffness with pain having settled in his back, it occurred to him that his kidneys might be at fault. "This was a happy idea, for by it I not only got rid of the pain but many other troubles as well. I took a full dose of Dr. Hamilton's Pills and was glad to note that some obstruction of the kidneys, which I had lately noticed, was at once relieved. The flushed appearance of my face gave way to a more rational color and there was a perceptible improvement in my appetite. Dr. Hamilton's Pills certainly act splendidly upon the blood, removing heat and fullness and that sort of dizziness that makes a man at the throttle wish when it seizes him that he were elsewhere."

No medicine gives such unquestionably good results for stomach, liver, and blood troubles as Dr. Hamilton's Pills; they are mild, certain, and always curative. Refuse any substitute. All dealers sell Dr. Hamilton's Pills, 25c per box, or The Catarhozone Co., Kingston, Ont.
