

POWER ON THE FARM

The Northey Gas or Gasoline Engine

Is the most economical power known for all purposes. Nowhere are its superior qualities shown to better advantage than in the Creamery or Cheese Factory. Gives out no heat, takes up but a few square feet of space. Starts on the instant, always ready for work, can be shut down and set running again, full speed in less than a minute. Cost for work done is away below either steam or windmill, and sold on the most liberal terms. Write us your ideas of what you need in power, and we'll tell you exactly how our engine would suit your purpose. Booklet free.

THE NORTHEY MANF'G CO., B 1021 King St. Subway. **TORONTO.**

Everybody is asking why the **IMPROVED UNITED STATES SEPARATORS** ARE SO PERFECT IN OPERATION and so superior to all others. The reason is very easy to be understood. It is the **Triple Current Separator.**

The milk passing three times the height of the bowl, while all others pass but once, practically makes three separators in one. The cream easiest separated is caught in the first passage, that not so easy in the second, and the third exhausts every trace of fat, making perfect separation. Examine the illustration, trace the course of the arrows, and you will be convinced.

University of Minnesota Agricultural Experiment Station.
ST. ANTHONY PARK, MINN., July 26, 1908.
During the past three years we have used the various sizes of the Improved United States Separator in our experimental work and also in giving practical instruction in dairying in the College of Agriculture, School of Agriculture and Dairy School of the University of Minnesota, and it gives me pleasure to state they have given most excellent satisfaction. They skim clean, are simple, durable, and not liable to get out of order.
T. L. HAECKER, Professor of Dairy Husbandry.

The Wisconsin Agricultural Experiment Station.
MADISON, WIS., July 21, 1908.
In conducting our Dairy School, we had occasion to use the various sizes of Improved U. S. Separator for dairy instruction during several winters past. Our students have always been pleased with the operation of these separators, and we find that they skim the milk very clean indeed from fat, and that they are generally very satisfactory.
W. A. HENRY, Dean College of Agriculture.
