

The seven countries express their will to take as goals for a ceiling on oil imports in 1985, the following figures:

- For France, Germany, Italy*, and the United Kingdom: the 1978 figure.
- Canada whose oil production will be declining dramatically over the period between now and 1985, will reduce its annual average rate of growth of oil consumption to 1%, with the consequent reduction of oil imports by 50,000 barrels per day by 1985. Canada's targets for imports will therefore be 0.6 million barrels per day.
- Japan adopts as a 1985 target a level not to exceed the range between 6.3 and 6.9 million barrels a day. Japan will review this target periodically and make it more precise in the light of current developments and growth projections, and do their utmost to reduce oil imports through conservation, rationalization of use and intensive development of alternative energy sources in order to move toward lower figures.
- The United States adopts as a goal for 1985 import levels not to exceed the levels either of 1977 or the adjusted target for 1979, i.e. 8.5 million barrels per day.

These 1985 goals will serve as reference to monitor both energy conservation and the development of alternative energy resources.

A high level group of representatives of our countries and the EEC Commission, within the OECD, will review periodically the results achieved. Slight adjustments will be allowed to take account of special needs generated by growth.

In fulfilling these commitments, our guiding principle will be to obtain fair supplies of oil products for all quantities, taking into account the differing patterns of supply, the efforts made to limit oil imports, the economic situation of each country, the quantities of oil available, and the potential of each country for energy conservation.

*Footnote: Italy's commitment with reference to the 1978 level is accepted in the context of the overall commitment of the European Community.
