

AERIAL SUB - COUNCIL

- (A) AIRWAYS (TRANSPORTATION)
 (B) RADIO (COMMUNICATIONS AND BROADCASTING)
 (C) WEATHER SERVICES

.....

FOREWORD

Aircraft and Radio (or Wireless) will soon be among the foremost and most important of world activities, covering the whole world (including what have been considered, until recently, remote spots upon the earth). Therefore, it is essential that these two shall work together. In the post-war period it is internationally very necessary that there must be some central organization for their regulation, having as its fundamental aim the equitable and most efficient arrangement of these services between all nations, to avoid confusion, prevent interference, provide and enforce safety rules and generally aid in the progress of man's newest services for the benefit of all, in such manner that they shall no be the cause of disputes and strife, which may threaten world security. Following are some basic ideas dealing with international problems in aerial activities. Suggestions are made for the handling of such problems and the unification of world-wide control by an Aerial Sub-Council of the International Court in such manner as to develop these services co-operatively, without unduly restricting national or private enterprise, thereby aiding mankind to benefit to the fullest extent from the progress of science and invention, towards
