

and quite unlike anything in the geological formations of this province. Under a magnifying glass small nutallic looking specks appear, but they are probably micaceous.

There is little doubt that the specimen found its way from more southern latitudes, along with the shells brought hither for the making of wampum.

FIG. 29. (Full Size.)

The only interesting feature about Fig. 29 is that it was found in a veritable mound on the property of Mr. C. A. See, Tremont Park, Tidd's Island, Gananoque, along with a number of other extremely interesting and valuable relics.

It is part of a pipe bowl made from freestone. It is simple in design, the pattern consisting merely of a few diagonal lines.

BREASTPLATES OR GORGETS, AND PENDANTS.

FIG. 30. ($\frac{1}{2}$ Size.)

FIG. 31. ($\frac{1}{2}$ Size.)

There is perhaps no other class of Indian relics regarding which there is so much diversity of opinion as in relation to such as those figured from 30 to 38.

They are usually formed of a light, greyish blue slate, from one-fourth to half an inch at the thickest, and thinned off at the edges.
