

ROYAL WARRANT

After supplying the Royal Stables for several years, His Majesty King George V has granted a Royal Warrant to the makers of **MOLASSINE MEAL**.

Sun-dried Grass Won't Give Good Milk

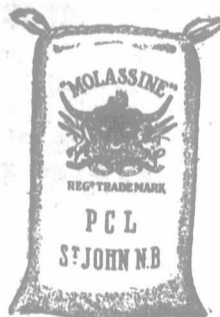

In early Spring, the milk from your cows may be plentiful and high in quality. But the summer sun dries all the juicy sweetness from the grass and it is an impossibility for the cows to derive the requisite nourishment from it. The flow of milk fails both in quality and quantity, your cows lose weight and you lose money. This loss, which amounts to a large sum yearly, can be easily saved. Instead of depending on the grass alone as a nourishment, supplement it with "**MOLASSINE MEAL**"—it will increase the flow and quality of the milk—make the cows actually gain weight—keep them in better health and make yourself much richer. The best food known to science to-day for milch cows, cattle, horses or any livestock for all year feeding is

MOLASSINE MEAL

Made in England

By feeding it as a regular ration, it supplements the needed nourishment of the grass or other foods and enables the cows to retain their fat sleekness—insures good health and keeps the flow and quality of the milk high as in the good grazing days. "**MOLASSINE MEAL**" is a good food. It builds up your cattle, horses and all other livestock—it keeps the stomach and the blood clean and pure and also enables the cows to derive the full nutrition from other foods. Feed "**MOLASSINE MEAL**" regularly and your animals will be free from worms, intestinal troubles and other kindred animal diseases which claim so many victims every year. "**MOLASSINE MEAL**" is guaranteed by the makers to keep in good condition for any length of time. Put up in 100-lb. bags. Begin to feed to-day. If your dealer cannot supply you, write us.

Wolves and Buffalo.

EXTERMINATION OF WOOD-BUFFALO THREATENED BY TIMBER-WOLVES.

Investigations carried on by the Forestry Branch of the Dominion Government have proven conclusively that several large herds of wild buffalo are still to be found in the hilly country on the northern boundary of Alberta, in the neighborhood of the Slave River. A party working under the direction of A. J. Bell, the Government agent at Fort Smith, made a study of the habits, and obtained photographs of these buffalo, which are identical in appearance with the former buffalo of the plains, the remnants of which were forced to seek shelter in the timbered fastnesses of the north.

These wood-buffalo, when fully grown, are able to defend themselves against their natural enemies, but in the winter, before the young yearlings have attained full strength, they frequently fall victims to the timber-wolves. Bands of these wolves hover around the flanks of the buffalo herds as they pass in single file from one feeding-ground to another, waiting for the opportunity to cut off a young animal and drive it from the beaten trail into the deep snow, where it is unable either to escape or to defend itself.

Partly eaten carcasses were found by the investigating party, which clearly indicated that the wolves were the cause. These great timber-wolves are of large size, and are very numerous in this region, where they menace the existence, not only of the wood-buffalo, but of other game as well. The Dominion Government already offers a bounty of twenty dollars apiece for their destruction, but, so sparsely inhabited is the region, and so clever are the wolves in avoiding traps, that the present bounty has had little effect in reducing their numbers. It is possible that the Dominion Government will raise the bounty here to forty dollars in the hope of ridding the regions of these pests and of preventing the extinction of the last wild bison in existence.

Forests Have a Beauty Value.

The International Forestry Congress, to which representatives came from every continent on the globe and which was probably the largest Forestry Congress ever held, met in Paris for the expressed purpose of studying economic and technical forestry problems, and of promoting legislative and administrative reforms in order to secure the conservation of the forests, the prevention of soil erosion and the reforesting of waste lands.

Such subjects as the right of the state to regulate private forest property, or to expropriate misused and denuded forest lands to insure public safety from floods, were discussed from an international view-point. This state right has long been recognized in Europe, where lands on watersheds can be expropriated unless managed by the owner according to strict Government regulations and an adequate forest cover maintained. The Federal Government of the United States has also recently given expression to this right by the Weeks Bill, passed in 1911 for the acquisition of lands necessary to protect the watersheds and navigability of navigable rivers. By exerting promptness and foresight, the Dominion Government has been able to forestall private occupation of the forest areas now reserved on the east slope of the Rockies, and on other important watersheds, but, should the necessity arise, its legal right to expropriate private land for the public benefit, seems to be borne out by the policy followed by other countries.

A feature, of striking significance in this Forestry Congress at Paris, international in representation and international in its scope, was that this Con-
