(From our Boston Correspondent.)
FECULATIVE COMMENTS AND
SUGGESTIONS,

COPPER SHARES. Predictions as to the future of copper metal prices have very often been incorrect in the past. Yet at the present time, the trend of copper prices is obviously upward and the the opinion that the outlook is better than at any time since the war.

ings of Chile. Obviously, the idea that a copper company which can make satisfactory earnings in a period of low copper prices will do correspondingly better in a period of higher metal prices is subject to qualification. The possibilities of Magma are infinitely greater than those of Chile.

Another company with a large per J. Walsh . . . . 129 102 135 366

The report of the Amoskeag Manufacturing Company for the year ended May 31, 1924, was the poorest ever sswed. Operations resulted in a loss of \$2,851,131. The company's best year was that ended in 1917 when earnings amounted to \$8,220,842.

There are 84,800 preferred shares outstanding and 345,600 common shares. There is no funded debt. The preferred at 75½ and the common at 72 indicate a stock market valuation of only slightly more than \$31,000,000 for the company. As of May 31st, it had cash, receivables and inventory 63% practically equivalent to total current been anxiously awaited with interest 56% liabilities, consisting of \$14,750,000 of by all fans, and another crowded rink notes payable. In addition, \$32,000,000 is the prediction for to-night. Both notes payable. In addition, \$32,000,000 is the prediction for to-night. Both 135½ of liberty bonds were owned. The entermined to fight every low. 107½ tire property is selling in the open inch of the way for the championship. liberty bonds held in the treasury. The exciting game over a splendid sheet of stock market places no valuation on ice. The line-ups for to-night are as mills equipped with 750,000 spindles, water power, real estate and potential apparently emerging from depression.

WARREN BROTHERS. Warren Brothers is a stock which ospect of record breaking domestic has consistently disappointed its ownonsumption and much larger exports ers. By any known method of estingether with the fact that surplus mating security values, the shares are stocks of the metal are lower than at decidedly underpriced. They are sell any time since 1918 seems to justify ing to yield more than 10 per cent. Assuming that the number of com-mon shares will be increased by conmetal prices, version of all the outstanding bonds, companies with small share capital- in every one of the last five years

izations offer the greatest speculative earnings have been substantially more possibilities. For instance, Chile than necessary to pay the current Copper can earn almost \$4 per share dividend on the prospective common on 11 cents copper while Magma can earn only \$2.50 per share. But Chile produces less than 50 pounds of copper capital. In view of the constant inper per share annually while Magma crease in the number of automobiles can produce 150 pounds per share. In view of the content in the number of automobiles in use and the demand for more and As a consequence, each increase of better roads, there should always be one cent per pound adds \$1.50 to the plenty of business for the concern. per share earnings of Magma and Eventually the shares should com-

#### The Gulf Ice

rence, stated that this ice had entered the Gulf by the way of the Straits of Belle Isle. Such a statement is most inaccurate. The ice the Sable I. met was formed in the Gulf. The north side of the Gulf from the River St. Lawrence to the Cormorant Rocks has been ice bound since the 14th and 15th December. When the coastal boat was navigating the Straits of Belle Isle all the Canadian coast inside of the island of Anticosti was iced up. The idea that the Arctic current flows through the Straits of Belle
Isle is a fallacy. If you will glance
at the map you will see that Belle
Isle is situated just at the northeast
outspace to the Straits and acceptance to the Straits and acceptance. entrance to the Straits and catches the ice floe when it does come down. The trend of the Straits is S.W. and The trend of the Straits is S.W. and N.E., so that a gale of wind from the eastward is required to drive ice into the Straits. The Arctic current does not enter the Straits; if you look at the Hydrographic Map of the United States you will see that the Arctic current trends to the S.E. from Domino, and passes outside of Belle Isle.
