

## The Weekly Monitor.

WEDNESDAY, OCTOBER 4, 1882.

The cultivation of bulbs is a favorite employment of the florist, flowers produced herefrom are among the most beautiful of the floral kingdom. The variety and brilliancy of colors, the beauty and delicate perfume of many of them can hardly be extended, while their culture is exceedingly simple. The out-door culture of bulbs will not treat of, but this being the season to prepare them for winter blooming in the parlor, we will give a rough idea of the method of cultivation, which we consider will prove most successful, and first we will speak of the tulip, in our opinion, most beautiful of all bulbous flowering plants, the Hyacinth. We have given it out of doors in the garden, in the house in flower pots and in glasses. We prefer to cultivate it in pots, because grown in glasses the bulbs will not grow another year, whereas, if grown in pots, they can be taken up after they are done blooming and the leaves are completely withered and dried, and placed in a dry, cool place until the following autumn, when they may be replanted. Our method of raising Hyacinths which gave the greatest satisfaction was to make a soil consisting of one part good sandy soil, one part of thoroughly decomposed stable manure, and one part of leaf mould, but not too hard, then we put on about a quarter of an inch of fine sand, (silver sand is best) and then we planted the bulbs, root end down, and then filled up the pot with the prepared soil, leaving nearly a third of the bulb exposed. The pots were then set out of doors and thoroughly watered, and when the surface of the soil showed somewhat dry, which would be in 15 to 20 days, we placed the pots in a large box about a foot deep, then filled the space between and around the pots with ash or sand level with the tops of the pots, and lastly we filled up the box with straw or leaves, and put it in the barn or a cold cellar where there would be just kept from freezing, and there we let them remain at least six weeks, after which we removed the pots from the box, brought them into the house, placed them in rather a cool room, and gradually brought them to the light and air, watering them at first sparingly, and always rain water, for we found by experience that hard water was injurious. Hyacinths treated in this way will be sure to do well. Polyanthus Narcissus should be similarly treated.

Lilies should be planted in deep pots and about three inches below the surface. The Auratum and Lancifolium lilies are our favorites. Lancifolium is a beautiful lily, but it does not bloom until about the third year after planting. The pretty little crosses should have a place in every collection, and the best way to grow them is to plant them, a dozen or more bulbs, in pots or shallow boxes about an inch below the surface; but there is no necessity for covering them up in dark places as we do Hyacinths. The Cyclamen is a very ornamental plant for the parlor; they should be planted singly in small pots not over 4 inches in diameter, watered freely after they commence to grow, and should have plenty of light and air, a cool room best for them.

Tulips are very pretty grown in boxes, and make a splendid show in the window. There are many other bulbous plants that are suitable for window culture, but those we have mentioned are the best. Every window, to be complete, should, however, have a hanging basket of oxalis; these should be planted about an inch deep, and about six or eight bulbs in a pot. Hyacinths cost from 25c. to 50c. per bulb, Polyanthus Narcissus, 10c. to 15c. each, Lilies, from 25c. to 75c. each, Crocus, 25c. to 50c. per dozen, Cyclamen, from 25c. to 50c. each, and Oxalis about 40c. per dozen bulbs. A few pots of bulbs in full bloom and the Puschia, Geraniums, &c., in a parlor in mid winter give an air of cheerfulness, when, perhaps, out of doors the weather is cold and stormy. Ten times the cost of house plants expended in artificial ornaments would produce half the beauty or pleasure. Vases, pictures, wall-brackets, &c., are very well, but we so soon become accustomed to them that we give up noticing them, whilst the cultivation of window plants gives a pleasing and constantly changing variety. We hope more attention will in future be given to window gardening in this country.

The Ninth Annual Session of the Annapolis County Union Sabbath School Convention, was held in the Baptist Meeting house, Melrose Square, on Thursday, Sep. 14th, 1882, commencing at 10 a. m.

The attendance was not large, and most of the persons who had been expected to prepare papers, failed to appear, still under the circumstances it was an interesting session.

Rev. F. Beattie ably presented the subject of "The Motive Power of the S. S., and how best to utilize it." He was followed in a short address by J. M. Eaton, Esq.

The Rev. J. T. Eaton, was then called upon, who, on his part, for the first time, presented "The Children, Our Inheritance and Our Obligation to Them." He was followed by the President of the Convention, A. Longley, Esq., in one of his clear, logical addresses. A paper had been prepared by J. M. Longley, Esq., on the requisites of the S. S. teacher. The writer being absent the paper was read by Rev. J. Wallace. It reflected much credit on the writer, showing that Mr. L. fully understood the requisites of the Christian teacher. It was unanimously voted to have the paper published. S. Jackson, Esq., followed the reading of this paper with some very interesting remarks, showing that he, too, had given the subject much study.

The typical Superintendent was then discussed by Rev. J. Wallace, who

brought out some very important features in this wonderful man. We wish all our country superintendents had been present to effect their image in the mirror.

J. Whitman, Esq., followed. Another essay was then read by its writer, Miss E. Jackson, on "The Typical Sabbath School." It was an illustration of the ancient festive custom of keeping the best wine till the last. A vote was passed, requesting the publication of this also, and as we hope it will appear in your columns comment is needless.

The paper was followed by a few remarks from Rev. W. E. Hall. Reports were had from 37 schools, viz., Baptist, 25, Methodist, 7, Union, 5. Number of teachers in all 213, scholars, 1,053. The next annual session is to be held with the Methodist church at Middleton, Conn.

The Monitor's course in allowing black-and-white illustrations in its columns is very reprehensible, and is a universal condemnation. That sort of thing is as far as possible from wit, and the present case is a vile beyond the power of language to describe.

The above item appears in the Spectator supplement distributed among the visitors to the Exhibition, and is a credit to the editor of the Spectator, and shows the part of the mind. In the first place, we beg to call the attention of this King Arthur to the line that immediately follows the paragraph, and to the fact that the Spectator's course in allowing black-and-white illustrations is very reprehensible, and is a universal condemnation. That sort of thing is as far as possible from wit, and the present case is a vile beyond the power of language to describe.

## Exhibition Notes.

The weather on Monday was fine, with a cool drying wind that had a good effect in drying up the surplus rainfall of Sunday.

At the Rink building, active work was in progress, the array of carpenters were busy in putting on the finishing touches. The several committees connected with the Exhibition were upon the spot attending to their respective duties of arranging the exhibits in order.

All through the day and well into the evening the artists kept pouring in. The evening train brought fresh additions from Kings, Hartford and Eastern counties, and every indication thus far betokens a successful Exhibition. The Rink building, which has so suddenly sprang into existence, is admirably adapted for exhibition, and similar purposes, and affords ample space to display to good advantage the rich and varied products of our country; and, although the building is not yet fully completed, all the details of its intended purpose, it stands today a gigantic compliment to the energy and enterprise of its promoters, and a credit to the skill and workmanship of Mr. John Wagstaff, under whose superintendence the work has been done.

The dimensions are as follows: Length, 145, width, 81 feet, giving an area on the ground floor of 11,855 superficial feet. The tower, one at each end, yet to be erected, will project to the external appearance of the structure; these towers will be on a ground floor of 1,000 feet, and the second floor of 1,000 feet, and the third floor of 1,000 feet, and the fourth floor of 1,000 feet, and the fifth floor of 1,000 feet, and the sixth floor of 1,000 feet, and the seventh floor of 1,000 feet, and the eighth floor of
