REPORTS OF BRANCHES.

The Geological Branch did not present any formal report this year as Dr. Ami's paper, which was on the programme for the last soirée, would have covered the same ground. The branch, has, however, continued its work, and leaders in this subject have attended all the excursions and explained the salient geological features of the places visited. Part of the skeleton of a large fish, probably a salmon, was found in a calcareous nodule at Besserer Grove and is now in Dr. Ami's possession.

The Botanical Section reports a most successful year's work. The botanical sub-excursions were well attended, several species new to this region were discovered and many new localities found
