

for tuberculosis at Hastings and Wokingham. The total is completed by 12,198 men in "British," that is, non-Canadian, hospitals, the largest number being 4,171 in the eastern command.

That the United States is anxious to profit by Canada's experience in the care of disabled men is evident from the number of official investigators visiting the various units of the hospitals command.

MEDICAL PREPARATIONS

ANTIPHLOGISTINE IN SEPTICAEMIA.

I did not pay very much attention to a slight prick on my right index finger, until the pain and swelling were quite severe. After several days when the symptoms of septicemia were pronounced, and the condition had not responded to the use of local applications and anti-septic treatments, I called in our surgeon, who advised the amputation of the finger at once. I was suffering intensely, and as a palliative measure I put on a liberal application of hot Antiphlogistine; the effect was instantaneous, the pain subsided, and the swelling was considerably reduced within a very short time. The application was repeated every few hours, and within one week I could attend to my work as usual, with the finger as good as ever. The instant relief from pain, the gradual amelioration of the condition, and the final result were the most remarkable I have ever seen.—C. W. Weaver, M.D., 609 The Gilbert, Grand Rapids, Mich.

SANMETTO AS A DIURETIC.

Sanmetto is a mild, non-irritating diuretic, which allays urinary irritation and increases urinary secretion. It is thought of in prostatitis, pyelitis, purulent or catarrhal cystitis, irritable condition of the bladder, gonorrhœa, enuresis in children, and in fevers where a mild diuretic is desirable to increase the secretion of urine. Sanmetto has been used by thousands of physicians in old men with irritable bladder and difficult urination, and they have found it a very satisfactory medicine. It is safe and harmless, and by its soothing action on the mucous membrane of the bladder it relieves the irritation, and adds greatly to the comfort of the patient. It increases the flow of urine, lessens the specific gravity, clears up clody urine, and relieves undue acidity. In all these ways it is of great benefit to the patient. In enlarged prostate it has done good service by its soothing qualities while reducing the enlargement.
