

Hecla Furnace Fire Pots

will last twice as long as fire pots made in the ordinary way.

They are made in two pieces, with a joint in the centre, leaving ample room for expansion and contraction. There is consequently *no strain* on HECLA FIRE POTS. In ten years I have not had to replace fire pots in 1% of the HECLA FURNACES sold. My Fire Pots are strengthened by heavy cast iron flanges, which provide 50% more radiating surface than plain pots.

"Hecla" Furnace

Grates are heavy triangular bars with toothed edges. The triangular bar is the stiffest and strongest grate made, and will keep a fire clean and free from clinkers with the least effort and attention.

Hecla Fused Joints keep the air sweet and pure, and free from all taint of smoke, gas or dust.

For further information, consult our local agent or write the Clare Furnace Builder for a catalogue and a free estimate.
