

- (ii) The Parties desire to maximize the harvest of Tahltan/Tuya sockeye salmon in their existing fisheries while considering the conservation needs of wild salmon runs. The Parties agree to manage the returns of Stikine River sockeye to ensure that each country obtains 50% of the TAC in their existing fisheries. Canada will endeavor to harvest all of the fish surplus to escapement and broodstock needs returning to the Tuya and Tahltan Lake systems.
- (iii) During this Chapter period, the Parties will continue to develop and implement joint Stikine enhancement programs designed to produce annually 100,000 returning sockeye salmon. If either Party intentionally departs from this goal, harvest share adjustments will be made as follows:
 - a. A Stikine Enhancement Production Plan (SEPP), designed to produce 100,000 returning adult sockeye salmon per year, shall be prepared annually by the Committee by February 1. The SEPP will summarize planned projects for the coming year and expected production from all planned enhancement activities including expected production from site specific egg takes, access improvements, and all other enhancement activities outlined in the annual SEPP. The Committee will use these data to prepare an enhancement production forecast based on the best available information.
 - b. The Panel shall review the annual SEPP and make recommendations to the Parties concerning the SEPP by February 28.
 - c. The Committee shall annually review and document joint enhancement projects and activities undertaken by the Parties, including returns, and present the results to the Panel during the annual post season review.
 - d. During 2009 through 2013, the Parties harvest shares will be as per paragraph 3(a)(1)(ii).
