a fointol fisting roil, and supposing the caane, or a length of the rut, is jast three feet, set it in the ground vertienl. Ty, and if the sun shises, it witl chat a
shadow ; now with a pricket-rule, you mansure the length of the shatow, and mind it, say two feet. Here then we linve a right angle of two feet and three fret. Now messure from the base of the tree to the end of its shad 0 w , and we will sapprose it to be twenty feet. Thr i fohleu, therefore, is simply this: If a cane three feet high cast: a shadow of two feet, how high mast a tree be to enst a shatow of twel. ty feet : Or, in other wowls, if tw.
gives three, how moch will twenty give ? By the simple "rule of three" we find the answer to be thirty feet Thus, by similar triangles, we have
 height.
Tuere is another method which has the advantage of heing still wo e simhe and canvenient, by which the hoeight, if tree may eanily lie deteran-
ined by its shadow. Any jurnon may fned by its shoulow. Any person may ensily measare the exnet height of a
the when the sun shines, or during hright moonlight, hy making twa lines on the ground, three feet miart, and then placing in the ground, on the line mearent the sun, a stick that shat stand exactly three feet out of the soil When the end of the shastow of thentick exnetly touches the farthest line, then slas the shadow of the tree will be exantiy in Jength the same measurement as its height. Of course,
in such n case, the sun will bent an exin such a case, the sun will bent an exthe menith and the horizon

But the resiler may muw
puse the sun duest't shine what then? Why, then not up the cane an before, say eighteen feet from the base of the tree. Now place your head on the
uround, with the eare between you and ground, with the eane between you and
the tree, maving nenver wo 0 : farther from it until you can just o: farther
fore top of the tree over the top of the enne,
then place a pehble or mask on the then place a pebble or mask on the ground at the point where you obiain
this view. The cane being three feet This view. The cane being three feet
high. the dintance from the pueblile to high. the atintance frum the jebble to
it will he two feet, and from the pebble to the lame of the sree, twenty feet, hence by the same rule, we find the
height of the tree to be twanty feet, The following method, with a little practice, will enable any person to sobjects with affiroximate or other object the with afjoroximinte accuracy
when the in not shining, and the method bere gives repreaents the simplest and quickest way to meanure heights, thoogh the resalto are not absolutely correct.
First make a mark on the tree or other olifect, say six feet from the groand, or place a nole s a feet upright aga nst it. Then walk away to sach $n$
distance that the lireadth of the hand, distance that the lireadth of the hand,
lield cont at full arm's length will just held cat at full arm s length, will just a point on the tree at the npher end of the six feet, and mive the hand up. waris and another brealth, and thus proceed until the whole height in measured. It may nometimes be convenient for an assistabt to stand at the foot of the tree, An 1 if with his hat on he will he niz fret high, he may serve as a measure to hegin with insterd of the rod. It is well to stand at some distance from or otherwine the upper measured poror otherwine the upper measured por-
tions will be larger than the lower on aceoant of the "longer legn" of the imaginary triangle. If the distance be too great for the breadth of the hand, one or twe fingers only may he used, or a nhort pocket rule. Or if the pecket rule be used, its separnte subdivisions tato inches may be made to indicate the portions urasured, and the whole compicted at one measurement.
Tie beights of perpendicular
The heights of perpendicular banks
of lakes or other preelpices, or the deof lakes or other preetpices, or the delarly misjuilged for the want of nome such mestas of mpasurement ns those described ahove. If the water of a lake freezes in winter, the ice forms an exeellent buse-tine for the measurement of any of itn shores or banks, and the
tope of trees which grow upon them.

## QUEER TRADES IN PARIS

There are many queer trades in Par's. One of the uidident st that of "painter of turseys
oaly to the poultry dealing fraterninty and is a highily uneful member of the e. mmunity By hin artistie skill he en munaity By hin artistie skill he
enablea the trader to pulm off a hirit of patriarehal nge, with is certain vague romance as to the date of its decense. upon the minguided honsewife, or even uponan experienced buyer, who has learned to juige a turkey aftex the manacr of enokery book writers. Turkeys when froshly kilied have shlay hlack legsand elans, lont ex the dsy if their death heronues more or lem a mat.
ter of ancient history their lower ex. ter of ancient hintory their lower ex-

color. Old turkev too, have long claws and horny looking beaks, which the ingenurus artist 1 mres and varnish. es. The artist goes ruand to his cuntomers three or four times a week, paints the feet of the hiris with his sos. lution (which was sold as a tradeseeret to the present owner for 449 ) enre. fully pares the nails and brak, and half as much again. It is caly during the desperate strugkle with the ancient beant that ensues at dinner time that you realize how fraululent are its pretensions to juvenality.
"Cat hilless" are not numerous, but the few who monupelize the trade wake a great deal of nuwney out of it. They walk through Paris a a out midaight with a sack and a cony le of terriers, and whes they eatch sight of a stray $\boldsymbol{f}_{\text {uss }}$ off go the dogs, who seldom return th skins are sol.l to farriers and their Prol to the keepers of eating howses in the
 vorite dish. But for stewed rablit one likes to he satisfied that a bunny har been sacifificed, so the workmen who delight in this dainty require to see a rabhit's heal as a proof of the hona fid. es of the dish. This would puzsle an ordinary sulividunl, but the "ent kil. ier is a genius and a Frenchmath, and He also deals in rahhit, $k$
an arrange ment with the cooks in the neighlouhheel to let him have the heads. at the same time as therkins of the rabbits for his penny or two. By this in. genious suethoil he is enabled to send out to hin eustomern two or three ents luodies minus the tails, with each rahs hift'n hend, and one more dainty dish is added to the Parisian menu and cight or ten shillings to the well filled purse The French eapital of the feline race. The French eappial harbors the largest in proportion to its aize. Whole colonies of thean are to be found in the vieinity of the markets, where they feed on broken victuals and make incesnant war on the rats.
At the Hallee Centrales their numbera have increased so rapidly of late that a portion of them hait to he destroyed, an they roamed ahout in hands like wild beasts, nnd were beginning to be dangerous. Duprex, the well known tenor
singer, has earnel the title of Le pere des chats, for he daily feeds hundreds
of these animals at his own expense.
